Federal Lands and Related Resources: Overview and Selected Issues for the 116th Congress

Updated April 25, 2019

Congressional Research Service

<https://crsreports.congress.gov>

R43429

Summary

The Property Clause in the U.S. Constitution (Article IV, §3, clause 2) grants Congress the authority to acquire, dispose of, and manage federal property. The 116th Congress faces multiple policy issues related to federal lands and natural resources. These issues include how much and which land the government should own and how lands and resources should be used and managed. These issues affect local communities, industries, ecosystems, and the nation.

There are approximately 640 million surface acres of federally owned land in the United States. Four agencies (referred to in this report as the federal land management agencies, or FLMAs) administer approximately 608 million surface acres (~95%) of federal lands: the Forest Service (FS) in the Department of Agriculture (USDA), and the Bureau of Land Management (BLM), U.S. Fish and Wildlife Service (FWS), and National Park Service (NPS), all in the Department of the Interior (DOI). The federal estate also extends to energy and mineral resources located below ground and offshore. BLM manages the onshore subsurface mineral estate and the Bureau of Ocean Energy Management, also in DOI, manages access to approximately 1.7 billion offshore acres in federal waters on the U.S. outer continental shelf. However, not all of these onshore or offshore acres can be expected to contain extractable mineral and energy resources.

This report introduces some of the broad themes and issues Congress has considered when addressing federal land policy and resource management. These include questions about the extent and location of the federal estate. For example, typically Congress considers both measures to authorize and fund the acquisition of additional lands and measures to convey some land out of federal ownership or management. Other issues for Congress include whether certain lands or resources should have additional protections, for example, through designation as wilderness or national monuments, or protection of endangered species and their habitat.

Other policy questions involve how federal land should be used. Certain federal lands are considered primary- or dominant-use lands as specified in statute by Congress. For example, the dominant-use mission of the National Wildlife Refuge System is the conservation of fish, wildlife, and plant resources and associated habitats for the benefit of current and future Americans, and the dual-use mission of the National Park System is to conserve unique resources and provide for their use and enjoyment by the public. BLM and FS lands, however, have a statutory mission to balance multiple uses: recreation, grazing, timber, habitat and watershed protection, and energy production, among others. Conflicts arise as users and land managers attempt to balance these uses. Congress often addresses bills to clarify, prioritize, and alter land uses, including timber harvesting, livestock grazing, and recreation (motorized and nonmotorized). With respect to energy uses, in addition to questions about balancing energy production against other uses, other questions include how to balance traditional and alternative energy production on federal lands.

Additional issues of debate include whether or how to charge for access and use of federal resources and lands, how to use any funds collected, and whether or how to compensate local governments for the presence of untaxed federal lands within their borders. Congress also faces questions about wildfire management on both federal and nonfederal lands, including questions of risk management and funding suppression efforts.

Introduction

Federal land management decisions influence the U.S. economy, environment, and social welfare. These decisions determine how the nation's federal lands will be acquired or disposed of, developed, managed, and protected. Their impact may be local, regional, or national. This report discusses selected federal land policy issues that the 116th Congress may consider through oversight, authorizations, or appropriations. The report also identifies CRS products that provide more detailed information.¹

The federal government manages roughly 640 million acres of surface land, approximately 28% of the 2.27 billion acres of land in the United States.² Four agencies (referred to in this report as the federal land management agencies, or FLMAs) administer a total of 608 million acres (~95%) of these federal lands:³ the Forest Service (FS) in the Department of Agriculture (USDA), and the Bureau of Land Management (BLM), U.S. Fish and Wildlife Service (FWS), and National Park Service (NPS), all in the Department of the Interior (DOI). Most of these lands are in the West and Alaska, where the percentage of federal ownership is significantly higher than elsewhere in the nation (see **Figure 1**). In addition, the Department of Defense administers approximately 11 million acres in military bases, training ranges, and more; and numerous other agencies administer the remaining federal acreage.⁴

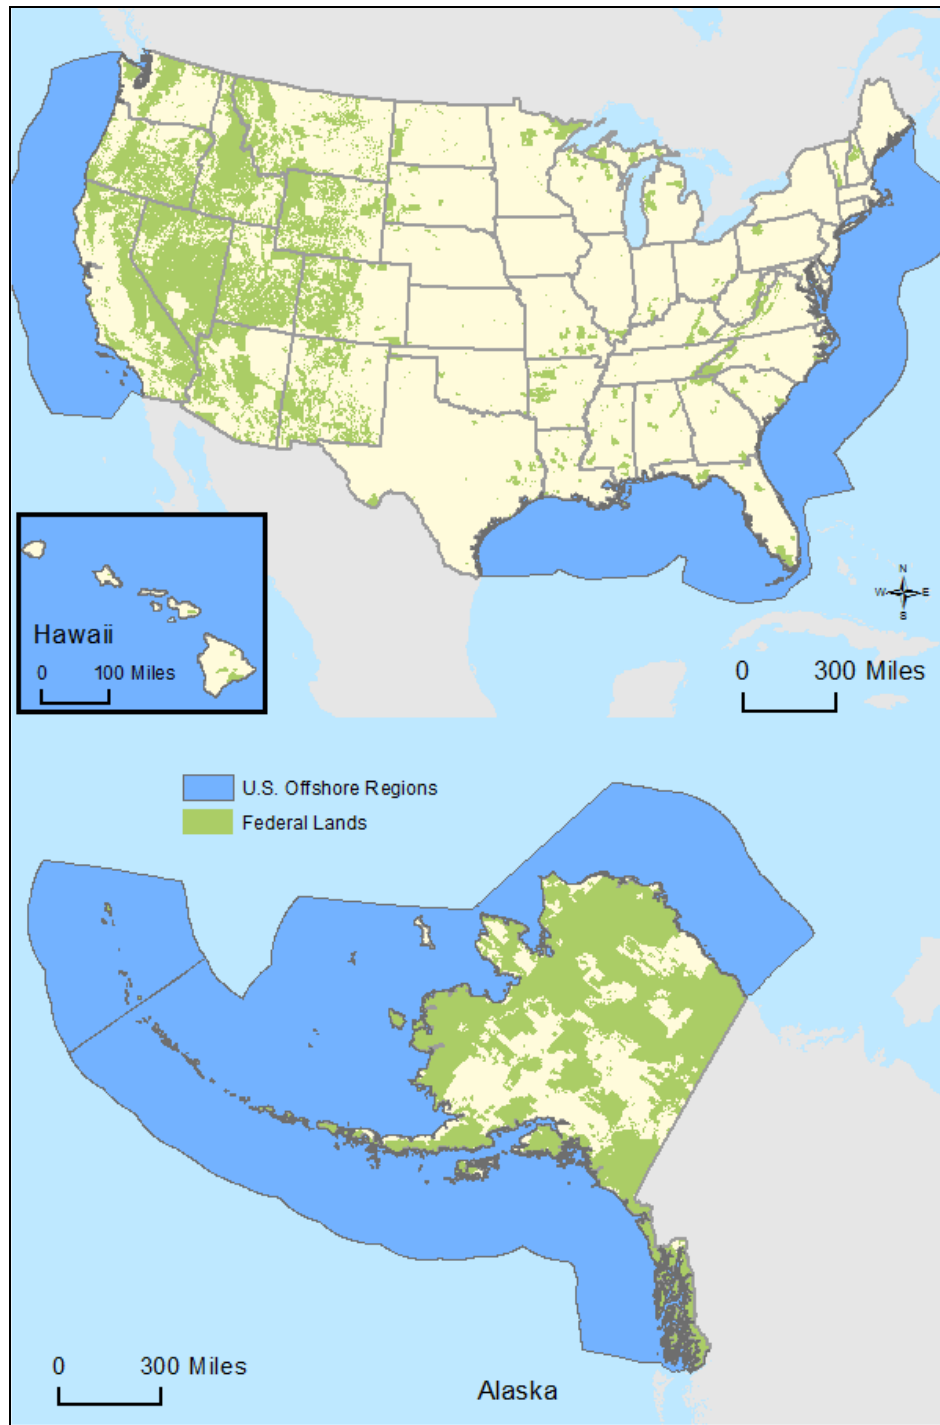

The federal estate also extends to energy and mineral resources located below ground and offshore. BLM manages the federal onshore subsurface mineral estate. The Bureau of Ocean and Energy Management (BOEM), also in DOI, manages access to about 1.7 billion offshore acres located beyond state coastal waters, referred to as U.S. offshore areas or the outer continental shelf (OCS). Not all of these acres can be expected to contain extractable mineral and energy resources, however.

¹ For a listing of CRS products on federal land issues, see CRS Issue Areas, Energy and Natural Resources: Federal Land Management at <http://www.crs.gov/iap/energy-and-natural-resources>.

² Total federal land in the United States is not definitively known. As of September 30, 2018, the four major federal land management agencies (FLMAs) managed a total of 608 million acres in the 50 states (610 million acres including territorial acreage); joint management of some areas or the inclusion of lands under easements or leases could adjust this figure. Inclusion of marine protected areas would increase this figure considerably. For additional information on acres managed by the four FLMAs and the Department of Defense, by state, see CRS Report R42346, *Federal Land Ownership: Overview and Data*, by Carol Hardy Vincent, Laura A. Hanson, and Carla N. Argueta.

³ In this report, the term *federal land* is used to refer to any land owned (fee simple title) and managed by the federal government, regardless of its mode of acquisition or managing agency. Unless otherwise stated, it excludes lands administered by a federal agency under easements, leases, contracts, or other arrangements. Also unless otherwise stated, acreage totals exclude federal lands for which the FLMA has secondary jurisdiction (in such cases another federal agency has primary jurisdiction and the lands are counted with that agency). Throughout the report, the term *federal land* may also include submerged federal lands where appropriate.

⁴ This report focuses on federal land managed by the four major FLMAs, plus the submerged lands managed by the Bureau of Ocean and Energy Management (BOEM).

Figure I. Federal Onshore and Offshore Management Areas

Source: CRS, using data from the National Atlas, Marine Regions, and Esri.

Notes: This figure reflects the approximately 608 million acres of surface federal lands managed by the federal land management agencies (FLMAs) in the 50 states and the District of Columbia. This map shows a generalized image of federal lands and DOI offshore planning regions without attempting to demonstrate with any specificity the geographical area of the U.S. outer continental shelf (OCS) or the U.S. exclusive economic zone (EEZ) as defined by state, federal, or international authorities. The Great Lakes are not included in the OCS or EEZ and are largely managed under state authorities. Due to scale considerations, all of the ocean area surrounding Hawaii in the figure is within U.S. waters.

Federal land policy and management issues generally fall into several broad thematic questions: Should federal land be managed to produce national or local benefits? How should current uses be balanced with future resources and opportunities? Should current uses, management, and protection programs be replaced with alternatives? Who decides how federal land resources should be managed, and how are the decisions made?

Some stakeholders seek to maintain or enhance the federal estate, while others seek to divest the federal estate to state or private ownership. Some issues, such as forest management and fire protection, involve both federal and nonfederal (state, local, or privately owned) land. In many cases, policy positions on federal land issues do not divide along clear party lines. Instead, they may be split along the lines of rural-urban, eastern-western, and coastal-interior interests.

Several committees in the House and Senate have jurisdiction over federal land issues. For example, issues involving the management of the national forests cross multiple committee jurisdictions, including the Committee on Agriculture and the Committee on Natural Resources in the House, and the Committee on Agriculture, Nutrition and Forestry and Committee on Energy and Natural Resources in the Senate. In addition, federal land issues are often addressed during consideration of annual appropriations for the FLMAs' programs and activities. These agencies and programs typically receive appropriations through annual Interior, Environment, and Related Agencies appropriations laws.

This report introduces selected federal land issues, many of which are complex and interrelated.⁵ The discussions are broad and aim to introduce the range of issues regarding federal land management, while providing references to more detailed and specific CRS products. The issues are grouped into these broad categories

- Federal Estate Ownership,
- Funding Issues Related to Federal Lands,
- Climate Policy and Federal Land Management,
- Energy and Minerals Resources,
- Forest Management,
- Range Management,
- Recreation,
- Other Land Designations,
- Species Management, and
- Wildfire Management.

This report generally contains the most recent available data and estimates.

Federal Estate Ownership

Federal land ownership began when the original 13 states ceded title of some of their land to the newly formed central government. The early federal policy was to dispose of federal land to generate revenue and encourage western settlement and development. However, Congress began to withdraw, reserve, and protect federal land through the creation of national parks and forest

⁵ This report does not address the management of surface or groundwater resources on federal lands. For more information on these issues, see CRS Report R45492, *Water Resource Issues in the 116th Congress*, by Nicole T. Carter et al. Congressional clients may also access the Water Resources Management subissue at <http://www.crs.gov/iap/energy-and-natural-resources>.

reserves starting in the late 1800s. This “reservation era” laid the foundation for the current federal agencies, whose primary purpose is to manage natural resources on federal lands. The four FLMAs and BOEM were created at different times, with different missions and purposes, as discussed below.

The ownership and use of federal lands has generated controversy since the late 1800s. One key area of debate is the extent of the federal estate, or, in other words, how much land the federal government should own. This debate includes questions about whether some federal lands should be disposed to state or private ownership, or whether additional land should be acquired for recreation, conservation, open space, or other purposes. For lands retained in federal ownership, discussion has focused on whether to curtail or expand certain land designations (e.g., national monuments proclaimed by the President or wilderness areas designated by Congress) and whether current management procedures should be changed (e.g., to allow a greater role for state and local governments or to expand economic considerations in decisionmaking). A separate issue is how to ensure the security of international borders while protecting the federal lands and resources along the border, which are managed by multiple agencies with their own missions.⁶

In recent years, some states have initiated efforts to assume title to the federal lands within their borders, echoing efforts of the “Sagebrush Rebellion” during the 1980s. These efforts generally are in response to concerns about the amount of federal land within the state, as well as concerns about how the land is managed, fiscally and otherwise. Debates about federal land ownership—including efforts to divest federal lands—often hinge on constitutional principles such as the Property Clause and the Supremacy Clause. The Property Clause grants Congress authority over the lands, territories, or other property of the United States: “the Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States.”⁷ The Supremacy Clause establishes federal preemption over state law, meaning that where a state law conflicts with federal law, the federal law will prevail.⁸ Through these constitutional principles, the U.S. Supreme Court has described Congress’s power over federal lands as “without limitations.”⁹ For instance, Congress could choose to transfer to states or other entities the ownership of areas of federal land, among other options.

Agencies Managing Federal Lands

The four FLMAs and BOEM manage most federal lands (onshore and offshore, surface and subsurface)

⁶ This report does not address border security issues related to federal land management. For more information on these issues, congressional clients may access the Border Security subissue at <http://www.crs.gov/iap/homeland-security-and-immigration>.

⁷ U.S. Const. Article IV, Section 3, cl. 2.

⁸ U.S. Const. Article VI, cl. 2.

⁹ See *United States v. San Francisco*, 310 U.S. 16, 29 (1940) and *Kleppe v. New Mexico*, 426 U.S. 529, 542-43.

- **Forest Service (FS)**, in the Department of Agriculture, manages the 193 million acre National Forest System under a multiple-use mission, including livestock grazing, energy and mineral development, recreation, timber production, watershed protection, and wildlife and fish habitat.¹⁰ Balancing the multiple uses across the national forest system has sometimes led to a lack of consensus regarding management decisions and practices.
- **Bureau of Land Management (BLM)**, in the Department of the Interior (DOI), manages 246 million acres of public lands, also under a multiple-use mission of livestock grazing, energy and mineral development, recreation, timber production, watershed protection, and wildlife and fish habitat.¹¹ Differences of opinion sometimes arise among and between users and land managers as a result of the multiple use opportunities on BLM lands.
- **U.S. Fish and Wildlife Service (FWS)**, in DOI, manages 89 million acres as part of the National Wildlife Refuge System (NWRS) as well as additional surface, submerged, and offshore areas.¹² FWS manages the NWRS through a dominant-use mission—to conserve plants and animals and associated habitats for the benefit of present and future generations. In addition, FWS administers each unit of the NWRS pursuant to any additional purposes specified for that unit.¹³ Other uses are permitted only to the extent that they are compatible with the conservation mission of the NWRS and any purposes identified for individual units. Determining compatibility can be challenging, but the FWS’s stated mission generally has been seen to have helped reduce disagreements over refuge management and use.
- **National Park Service (NPS)**, in DOI, manages 80 million acres in the National Park System. The NPS has a dual mission—to preserve unique resources and to provide for their enjoyment by the public. NPS laws, regulations, and policies emphasize the conservation of park resources in conservation/use conflicts. Tension between providing recreation and preserving resources has produced management challenges for NPS.
- **Bureau of Ocean Management (BOEM)**, also in DOI, manages energy resources in areas of the outer continental shelf (OCS) covering approximately 1.7 billion acres located beyond state waters. These areas are defined in the Submerged Lands Act and the Outer Continental Shelf Lands Act (OCSLA).¹⁴

¹⁰ As authorized by the Multiple-Use and Sustained-Yield Act of 1960, P.L. 86-517, 16 U.S.C. §§528-531.

¹¹ As authorized by the Federal Land Policy and Management Act of 1976, P.L. 94-579, 43 U.S.C. §§1701, et seq.

¹² This figure only includes National Wildlife Refuge System (NWRS) federal lands within the 50 U.S. states under the primary jurisdiction of the U.S. Fish and Wildlife Service (FWS). It does not include lands and waters in the U.S. territories, areas administered under secondary or shared jurisdiction, marine national monuments, or acres administered by the FWS but not owned by the government (e.g., acres administered or managed pursuant to easements or leases). In total, FWS administers, through primary or secondary jurisdiction or co-management, 837 million acres of lands and waters within the NWRS. In addition, FWS administers an additional 19 million acres through other authorities that are not included within the NWRS. For more information, see U.S. Fish and Wildlife Service, *2018 Annual Lands Report*, https://www.fws.gov/refuges/land/PDF/2018_Annual_Report_of_Lands_Data_Tables.pdf.

¹³ For example, P.L. 115-97 amended the purpose of the Arctic National Wildlife Refuge to “provide for an oil and gas program on the Coastal Plain.” For more information on the Arctic National Wildlife Refuge, see CRS Report RL33872, *Arctic National Wildlife Refuge (ANWR): An Overview*, by Laura B. Comay, Michael Ratner, and R. Eliot Crafton.

¹⁴ 43 U.S.C. §§1301 et seq. and 43 U.S.C. §1331 et seq. Generally, the outer continental shelf (OCS) begins 3-9 nautical miles from shore (depending on the state) and extends 200 nautical miles outward, or farther if the continental

BOEM's mission is to balance energy independence, environmental protection, and economic development through responsible, science-based management of offshore conventional and renewable energy resources. BOEM schedules and conducts OCS oil and gas lease sales, administers existing oil and gas leases, and issues easements and leases for deploying renewable energy technologies,¹⁵ among other responsibilities.

Agency Acquisition and Disposal Authorities

Congress has granted the FLMAs various authorities to acquire and dispose of land. The extent of this authority differs considerably among the agencies. The BLM has relatively broad authority for both acquisitions and disposals under the Federal Land Policy and Management Act of 1976 (FLPMA).¹⁶ By contrast, NPS has no general authority to acquire land to create new park units or to dispose of park lands without congressional action. The FS authority to acquire lands is limited mostly to lands within or contiguous to the boundaries of a national forest, including the authority to acquire access corridors to national forests across nonfederal lands.¹⁷ The agency has various authorities to dispose of land, but they are relatively constrained and infrequently used. FWS has various authorities to acquire lands, but no general authority to dispose of its lands. For example, the Migratory Bird Conservation Act of 1929 grants FWS authority to acquire land for the National Wildlife Refuge System—using funds from sources that include the sale of hunting and conservation stamps—after state consultation and agreement.¹⁸

The current acquisition and disposal authorities form the backdrop for consideration of measures to establish, modify, or eliminate authorities, or to provide for the acquisition or disposal of particular lands. Congress also addresses acquisition and disposal policy in the context of debates on the role and goals of the federal government in owning and managing land generally.

shelf extends beyond 200 miles.

Funding Issues

Funding for federal land and FLMA natural resource programs presents an array of issues for Congress. The FLMAs receive their discretionary appropriations through Interior, Environment, and Related Agencies appropriations laws. In addition to other questions related directly to appropriations, some funding questions relate to the Land and Water Conservation Fund (LWCF). Congress appropriates funds from the LWCF for land acquisition by federal agencies, outdoor recreation needs of states, and other purposes. Under debate are the levels, sources, and uses of funding and whether some funding should be continued as discretionary. A second set of questions relates to the compensation of states or counties for the presence of nontaxable federal lands and resources, including whether to revise or maintain existing payment programs. A third set of issues relates to the maintenance of assets by the agencies, particularly how to address their backlog of maintenance projects while achieving other government priorities.

Land and Water Conservation Fund

The Land and Water Conservation Fund Act of 1965 was enacted to help preserve, develop, and assure access to outdoor recreation facilities to strengthen the health of U.S. citizens.¹⁹ The law created the Land and Water Conservation Fund in the U.S. Treasury as a funding source to implement its outdoor recreation purposes. The LWCF has been the principal source of monies for land acquisition for outdoor recreation by the four FLMAs. The LWCF also has funded a matching grant program to assist states with outdoor recreational needs and other federal programs with purposes related to lands and resources.

¹⁹ Land and Water Conservation Fund Act of September 3, 1964; P.L. 88-578, 78 Stat. 897. 54 U.S.C. §§200301, et seq.

The provisions of the LWCF Act that provide for \$900 million in specified revenues to be deposited in the fund annually have been permanently extended.²⁰ Nearly all of the revenues are derived from oil and gas leasing in the OCS. Congress determines the level of discretionary appropriations each year, and yearly appropriations have fluctuated widely since the origin of the program. In addition to any discretionary appropriations, the state grant program receives (mandatory) permanent appropriations.²¹

There is a difference of opinion as to how funds in the LWCF should be allocated. Current congressional issues include deciding the amount to appropriate for land acquisition, the state grant program, and other purposes. Several other issues have been under debate, including whether to provide the fund with additional permanent appropriations; direct revenues from other activities to the LWCF; limit the use of funds for particular purposes, such as federal land acquisition; and require some of the funds to be used for certain purposes, such as facility maintenance. Another area of focus is the state grant program, with issues including the impact of anticipated increases in mandatory funding, the way in which funds are apportioned among the states, and the extent to which the grants should be competitive.

Federal Payment and Revenue-Sharing Programs

As a condition of statehood, most states forever waived the right to tax federal lands within their borders. However, some assert that states or counties should be compensated for services related to the presence of federal lands, such as fire protection, police cooperation, or longer roads to skirt the federal property. Under federal law, state and local governments receive payments through various programs due to the presence of federally owned land.²² Some of these programs are run by specific agencies and apply only to that agency’s land. Many of the payment programs are based on revenue generated from specific land uses and activities, while other payment programs are based on acreage of federal land and other factors. The adequacy, coverage, equity, and sources of the payments for all of these programs are recurring issues for Congress.

²⁰ John D. Dingell, Jr. Conservation, Management, and Recreation Act, P.L. 116-9, Section 3001.

²¹ Mandatory appropriations are provided to the state grant program under Gulf of Mexico Energy Security Act (GOMESA), P.L. 109-432, Division C, §105. DOI has estimated that under these provisions of law, \$62.6 million in mandatory appropriations would accrue to the LWCF in FY2018 for the state grant program. DOI also has determined that these monies are in addition to the \$900 million that had been deposited in the fund annually under the LWCF Act.

²² For example, a program commonly referred to as Impact Aid supports local schools based on the presence of children of federal employees, including military dependents. It provides some support to local governments, however, and to some extent it compensates for lost property-tax revenue when military families live on federally owned land. For more information, see CRS Report R45400, *Impact Aid, Title VII of the Elementary and Secondary Education Act: A Primer*, by Rebecca R. Skinner.

The most widely applicable onshore program, administered by DOI, applies to many types of federally owned land and is called Payments in Lieu of Taxes (PILT).²³ Each eligible county's PILT payment is calculated using a complex formula based on five factors, including federal acreage and population. Most counties containing the lands administered by the four FLMAs are eligible for PILT payments. Counties with NPS lands receive payments primarily under PILT. Counties containing certain FWS lands are eligible to receive PILT payments, and FWS also has an additional payment program for certain refuge lands, known as the Refuge Revenue Sharing program. In addition to PILT payments, counties containing FS and BLM lands also receive payments based primarily on receipts from revenue-producing activities on their lands. Some of the payments from these other programs will be offset in the county's PILT payment in the following year. One program (Secure Rural Schools, or SRS) compensated counties with FS lands or certain BLM lands in Oregon for declining timber harvests. The authorization for the SRS program expired after FY2018, and the last authorized payments are to be disbursed in FY2019.

The federal government shares the revenue from mineral and energy development, both onshore and offshore. Revenue collected (rents, bonuses, and royalties) from onshore mineral and energy development is shared 50% with the states (less administrative costs) under the Mineral Leasing Act (MLA) of 1920.²⁴ Alaska generally receives 90% of revenues collected on federal onshore leases (less administrative costs) under the MLA, but some statutes specific to certain areas—including the National Petroleum Reserve in Alaska (NPR-A) and the Coastal Plain of the Arctic National Wildlife Refuge (ANWR)—provide for a 50% revenue share with the state.²⁵

Revenue collected from offshore mineral and energy development on the outer continental shelf (OCS) is shared with the coastal states, albeit at a lower rate. The OCSLA allocates 27% of the revenue generated from certain federal offshore leases to the coastal states.²⁶ Separately, the Gulf of Mexico Energy Security Act of 2006 (GOMESA; P.L. 109-432) provided for revenue sharing at a rate of 37.5% for four coastal states,²⁷ up to a collective cap.²⁸ Some coastal states have advocated for a greater share of the OCS revenues based on the impacts oil and gas projects have on coastal infrastructure and the environment, while other states and stakeholders have contended that more of the revenue should go to the general fund of the Treasury or to other federal programs.

Deferred Maintenance

The FLMAs have maintenance responsibility for their buildings, roads and trails, recreation sites, and other infrastructure. Congress continues to focus on the agencies' *deferred maintenance and repairs*, defined as "maintenance and repairs that were not performed when they should have been or were scheduled to be and which are put off or delayed for a future period."²⁹ The agencies assert that continuing to defer maintenance of facilities accelerates their rate of deterioration, increases their repair costs, and decreases their value and safety.

Congressional and administrative attention has centered on the NPS backlog, which has continued to increase from an FY1999 estimate of \$4.25 billion in nominal dollars. Currently, DOI estimates deferred maintenance for NPS for FY2017 at \$11.2 billion.³⁰ Nearly three-fifths of the backlogged maintenance is for roads, bridges, and trails. The other FLMAs also have maintenance backlogs. DOI estimates that deferred maintenance for FY2017 for FWS is \$1.4 billion and the BLM backlog is \$0.8 billion. FS estimated its backlog for FY2017 at \$5.0 billion, with approximately 70% for roads, bridges, and trails.³¹ Thus, the four agencies together had a combined FY2017 backlog estimated at \$18.5 billion.

The backlogs have been attributed to decades of funding shortfalls to address capital improvement projects. However, it is not always clear how much total funding has been provided for deferred maintenance each year because some annual presidential budget requests and appropriations documents did not identify and aggregate all funds for deferred maintenance. Currently, there is debate over the appropriate level of funds to maintain infrastructure, whether to use funds from other discretionary or mandatory programs or sources, how to balance maintenance of the existing infrastructure with the acquisition of new assets, and the priority of maintaining infrastructure relative to other government functions.

³⁰ The NPS estimate is \$11.6 billion, including assets which the NPS does not own.

³¹ The estimates of deferred maintenance of DOI agencies were provided to CRS by DOI on February 6, 2018. The estimate of deferred maintenance of the Forest Service was provided to CRS by the Forest Service on January 30, 2018.

Climate Policy and Federal Land Management

Scientific evidence shows that the United States' climate has been changing in recent decades.³² This poses several interrelated and complex issues for the management of federal lands and their resources, in terms of mitigation, adaptation, and resiliency. Overall, climate change is introducing uncertainty about conditions previously considered relatively stable and predictable. Given the diversity of federal land and resources, concerns are wide-ranging and include invasive species, sea-level rise, wildlife habitat changes, and increased vulnerability to extreme weather events, as well as uncertainty about the effects of these changes on tourism and recreation. Some specific observed effects of climate change include a fire season that begins earlier and lasts longer in some locations, warmer winter temperatures that allow for a longer tourism season but also for various insect and disease infestations to persist in some areas, and habitat shifts that affect the status of sensitive species but may also increase forest productivity.³³ Another concern is how climate change may affect some iconic federal lands, such as the diminishing size of the glaciers at Glacier National Park in Montana and several parks in Alaska, or the flooding of some wildlife refuges.³⁴

The role of the FLMAs in responding to climate change is an area under debate. Some stakeholders are concerned that a focus on climate change adaptation may divert resources and attention from other agency activities and near-term challenges. Others see future climate conditions as representing an increased risk to the effective performance of agency missions and roles.

A related debate concerns the impact of energy production on federal lands. Both traditional sources of energy (nonrenewable fossil fuels such as oil, gas, and coal) and alternative sources of energy (renewable fuels such as solar, wind, and geothermal) are available on some federal lands. A 2018 report from the U.S. Geological Survey estimated that greenhouse gas emissions resulting from the extraction and use of fossil fuels produced on federal lands account for, on average, approximately 24% of national emissions for carbon dioxide, 7% for methane, and 1.5% for nitrous oxide.³⁵ In addition, the report estimated that carbon sequestration on federal lands offset approximately 15% of those carbon dioxide emissions over the study period, 2005 through 2014. This, along with other factors, has contributed to questions among observers about the extent to which the agencies should provide access to and promote different sources of energy production

³² For more discussion of climate change science, see D.J. Wuebbles et al., *Climate Science Special Report: Fourth National Climate Assessment*, U.S. Global Climate Change Research Program, 2017, https://science2017.globalchange.gov/downloads/CSSR2017_FullReport.pdf. National Research Council.

Pederson, Stephen T. Gray, and Daniel B. Fagre, *Long-Duration Drought Variability and Impacts on Ecosystem Services: A Case Study from Glacier National Park, Montana*, U.S. Geologic Survey, Earth Interactions, vol. 10, paper 4, January 2006, at <http://www.ncdc.noaa.gov/paleo/pubs/pederson2006/pederson2006.html>.

³⁵ See for example, Matthew D. Merrill, Benjamin M. Sleeter, and Philip A. Freeman, et al., *Federal Lands Greenhouse Gas Emissions and Sequestration in the United States: Estimates for 2005-14*, United States Geological Survey, 2018-5131, 2018, <https://pubs.usgs.gov/sir/2018/5131/sir20185131.pdf>.

on federal lands based on the effects on climate from that production. Since fossil fuel emissions contribute to climate change, some stakeholders concerned about climate change assert that the agencies should prioritize renewable energy production on federal lands over traditional energy sources. Others assert that, even with renewable energy growth, conventional sources will continue to be needed in the foreseeable future, and that the United States should pursue a robust traditional energy program to ensure U.S. energy security and remain competitive with other nations, including continuing to make fossil fuel production available on federal lands.

Specific legislative issues for Congress may include the extent to which the FLMAs manage in furtherance of long-term climate policy goals, and proposals to restructure or improve collaboration among the FLMAs regarding climate change activities and reporting.

CRS Report R43915, *Climate Change Adaptation by Federal Agencies: An Analysis of Plans and Issues for Congress*, coordinated by Jane A. Leggett.

Energy and Mineral Resources

Much of the onshore federal estate is open to energy and mineral exploration and development, including BLM and many FS lands. However, many NPS lands and designated wilderness areas, as well as certain other federal lands, have been specifically withdrawn from exploration and development.³⁶ Most offshore federal acres on the U.S. outer continental shelf are also available for exploration and development, although BOEM has not scheduled lease sales in all available areas.³⁷ Energy production on federal lands contributes to total U.S. energy production. For example, in 2017, as a percentage of total U.S. production, approximately 24% of crude oil and 13% of natural gas production came from federal lands.³⁸ Coal production from federal lands has consistently accounted for about 40% of annual U.S. coal production over the past decade.

Federal lands also are available for renewable energy projects. Geothermal capacity on federal lands represents 40% of U.S. total geothermal electric generating capacity.³⁹ Solar and wind energy potential on federal lands is growing and, based on BLM-approved projects, there is potential for 3,300 megawatts (MW) of wind and 6,300 MW of solar energy on federal lands.⁴⁰ The first U.S. offshore wind farm began regular operations in 2016, and BOEM has issued 13 wind energy leases off the coasts of eight East Coast states.

The 116th Congress may continue debate over issues related to access to and availability of onshore and offshore federal lands for energy and mineral development. This discussion includes

³⁶ The Mining in the Parks Act of 1976 (16 U.S.C. §§1901 et seq.) closed all NPS units to the location of new mining claims, although existing claims must still be honored (see 36 C.F.R. Part 9B). P.L. 95-495 §11(a) is an example of a wilderness designation that withdrew the area from mining and mineral exploration.

³⁷ See CRS Report R44692, *Five-Year Offshore Oil and Gas Leasing Program for 2019-2024: Status and Issues in Brief*, by Laura B. Comay.

³⁸ Data from <https://www.onrr.gov/about/production-data.htm> and <http://useiti.doi.gov/explore/#federal-production> (for all data except U.S. coal production).

³⁹ BLM, “Geothermal Energy,” at <https://www.blm.gov/programs/energy-and-minerals/renewable-energy/geothermal-energy>.

⁴⁰ The general statutory framework for solar and wind energy development on federal lands is contained within Title V of the Federal Land Policy and Management Act of 1976, under its provisions for rights-of-way (ROW) grants (43 U.S.C. 1761). Data from BLM, *Renewable Energy: Wind Fact Sheet*, March 2018, <https://www.blm.gov/programs/energy-and-minerals/renewable-energy/wind-energy>; and BLM, *Renewable Energy: Solar Fact Sheet*, March 2018, <https://www.blm.gov/programs/energy-and-minerals/renewable-energy/solar-energy>.

how to balance energy and mineral development with environmental protection, postproduction remediation, and other uses for those federal lands. Some would like to open more federal lands for energy development, whereas others have sought to retain or increase restrictions and withdrawals for certain areas they consider too sensitive or inappropriate for traditional and/or renewable energy development. Congress also continues to focus on the energy and mineral permitting processes, the timeline for energy and mineral development, and issues related to royalty collections. Other issues may include the federal management of split estates, which occur when the surface and subsurface rights are held by different entities.

Onshore Resources

Oil and Natural Gas

Onshore oil and natural gas produced on federal lands in 2017 accounted for 5% and 9% of total U.S. oil and gas production, respectively.⁴¹ Development of oil, gas, and coal on federal lands is governed primarily by the Mineral Leasing Act of 1920 (MLA).⁴² The MLA authorizes the Secretary of the Interior—through BLM—to lease the subsurface rights to most BLM and FS lands that contain fossil fuel deposits, with the federal government retaining title to the lands.⁴³ Leases include an annual rental fee and a royalty payment generally determined by a percentage of the value or amount of the resource removed or sold from the federal land. Congress has at times debated raising the onshore royalty rate for federal oil and gas leases, which has remained at the statutory minimum of 12.5% since the enactment of the MLA in 1920.

Access to federal lands for energy and mineral development has been controversial. The oil and gas industry contends that entry into currently unavailable areas is necessary to ensure future domestic oil and gas supplies. Opponents maintain that the restricted lands are unique or environmentally sensitive and that the United States could realize equivalent energy gains through conservation and increased exploration on current leases or elsewhere. Another controversial issue is the permitting process and timeline, which the Energy Policy Act of 2005 (EPA05) revised for oil and gas permits.⁴⁴ An additional contested issue has been whether to pursue oil and gas development in the Arctic National Wildlife Refuge in northeastern Alaska. P.L. 115-97, enacted in December 2017, provided for the establishment of an oil and gas program in the refuge.

⁴² Energy Policy Act of 2005 (EPA05); P.L. 109-58; 30 U.S.C. §181. EPA05 amended the MLA and also included provisions governing access, leasing, and management of energy development on BLM and FS lands.

⁴³ Exceptions include most BLM and FS lands classified as wilderness, lands incorporated in cities and towns, and lands that have otherwise been administratively or statutorily withdrawn from entry. BLM also manages energy leasing on certain other federal lands on which leasing activity is authorized, such as specified lands in a few units of the National Wildlife Refuge System and the National Park System.

CRS Report R43891, *Mineral Royalties on Federal Lands: Issues for Congress*, by Marc Humphries.

Coal

Congress debates several issues regarding coal production on federal lands, including how to balance coal production against other resource values and the potential effects of coal production on issues related to climate change. Other concerns include how to assess the value of the coal resource, what is the fair market value for the coal, and what should be the government's royalty. A 2013 GAO analysis found inconsistencies in how BLM evaluated and documented federal coal leases.⁴⁵ In addition, a 2013 DOI Inspector General report found that BLM may have violated MLA provisions by accepting below-cost bids for federal coal leases.⁴⁶ The Obama Administration issued a new rule for the valuation of coal, which reaffirmed that the value for royalty purposes is at or near the mine site and that gross proceeds from arm's-length contracts are the best indication of market value.⁴⁷ This rule was repealed by the Trump Administration on August 7, 2017 (to comply with Executive Order (E.O.) 13783),⁴⁸ returning to the previous valuation rules in place.⁴⁹ E.O. 13783 also lifted "any and all" moratoria on federal coal leasing put in place by the Obama Administration.

Renewable Energy on Federal Land

Both BLM and FS manage land that is considered suitable for renewable energy generation and as such have authorized projects for geothermal, wind, solar, and biomass energy production. BLM manages the solar and wind energy programs on about 20 million acres for each program and about 800 geothermal leases on federal lands.⁵⁰ Interest in renewable energy production comes in part from concern over the impact of emissions from fossil fuel-fired power plants and the related adoption of statewide renewable portfolio standards that require electricity producers to supply a certain minimum share (which varies by state) of electricity from renewable sources. Congressional interest in renewable energy resources on onshore federal lands has focused on whether to expand the leasing program for wind and solar projects versus maintaining the current

right-of-way authorization process, and how to balance environmental concerns with the development and production of these resources.

- **Geothermal Energy.** Geothermal energy is produced from heat stored under the surface of the earth. Geothermal leasing on federal lands is conducted under the authority of the Geothermal Steam Act of 1970, as amended,⁵¹ and is managed by BLM, in consultation with FS.
- **Wind and Solar Energy.** Development of solar and wind energy sources on BLM and FS lands is governed primarily by right-of-way authorities under Title V of FLPMA.⁵² The potential wildlife impacts from wind turbines and water supply requirements from some solar energy infrastructure remain controversial. Issues for Congress include how to manage the leasing process and whether or how to balance such projects against other land uses identified by statute.
- **Woody Biomass.**⁵³ Removing woody biomass from federal lands for energy production has received special attention because of biomass’s widespread availability. Proponents assert that removing biomass density on NFS and BLM lands also provides landscape benefits (e.g., improved forest resiliency, reduced risk of catastrophic wildfires). Opponents, however, identify that incentives to use wood and wood waste might increase land disturbances on federal lands, and they are concerned about related wildlife, landscape, and ecosystem impacts. Other issues include the role of the federal government in developing and supporting emerging markets for woody biomass energy production, and whether to include biomass removed from federal lands in the Renewable Fuel Standard.⁵⁴

Locatable Minerals

Locatable minerals include metallic minerals (e.g., gold, silver, copper), nonmetallic minerals (e.g., mica, gypsum), and other minerals generally found in the subsurface.⁵⁵ Developing these minerals on federal lands is guided by the General Mining Law of 1872. The law, largely unchanged since enactment, grants free access to individuals and corporations to prospect for minerals in public domain lands,⁵⁶ and allows them, upon making a discovery, to stake (or “locate”) a claim on the deposit. A claim gives the holder the right to develop the minerals and apply for a patent to obtain full title of the land and minerals. Congress has imposed a moratorium on mining claim patents in the annual Interior appropriations laws since FY1995, but has not restricted the right to stake claims or extract minerals.

⁵¹ 30 U.S.C. §§1001-1028.

⁵² 43 U.S.C. §§1761-1771.

⁵³ Woody biomass is defined by FS and BLM as the trees and woody plants, including limbs, tops, needles, leaves, and other woody parts, grown in a forest, woodland, or rangeland environment that are the byproducts of forest management.

⁵⁴ For more information on the renewable fuel standard, see CRS Report R43325, *The Renewable Fuel Standard (RFS): An Overview*, by Kelsi Bracmort.

⁵⁵ Management of nonlocatable minerals (e.g., sand, gravel, and stone) on federal lands is governed by the Materials Act of 1947.

⁵⁶ That is, public domain lands that have not otherwise been closed to entry through wilderness designation or other restrictions.

The mining industry supports the claim-patent system, which offers the right to enter federal lands and prospect for and develop minerals. Critics consider the claim-patent system to not properly value publicly owned resources because royalty payments are not required and the amounts paid to maintain a claim and to obtain a patent are small. New mining claim location and annual claim maintenance fees are currently \$37 and \$155 per claim, respectively.⁵⁷

Offshore Resources

The federal government is responsible for managing energy resources in approximately 1.7 billion acres of offshore areas belonging to the United States (see **Figure 1**). These offshore resources are governed by the Outer Continental Shelf Lands Act of 1953 (OCSLA), as amended, and management involves balancing domestic energy demands with protection of the environment and other factors.⁵⁸ Policymakers have debated access to ocean areas for offshore drilling, weighing factors such as regional economic needs, U.S. energy security, the vulnerability of oceans and shoreline communities to oil-spill risks, and the contribution of oil and gas drilling to climate change. Some support banning drilling in certain regions or throughout the OCS, through congressional moratoria, presidential withdrawals, and other measures. Others contend that increasing offshore oil and gas development will strengthen and diversify the nation's domestic energy portfolio and that drilling can be done in a safe manner that protects marine and coastal areas.

Offshore Oil and Gas Leases

The Bureau of Ocean Energy Management administers approximately 2,600 active oil and gas leases on nearly 14 million acres on the OCS.⁵⁹ Under the OCSLA, BOEM prepares forward-looking, five-year leasing programs to govern oil and gas lease sales. BOEM released its final leasing program for 2017-2022 in November 2016, under the Obama Administration. The program schedules 10 lease sales in the Gulf of Mexico region and 1 in the Alaska region, with no sales in the Atlantic or Pacific regions.⁶⁰ In January 2018, under the Trump Administration, BOEM released a draft proposed program for 2019-2024, which would replace the final years of the Obama Administration program.⁶¹ The program proposes 12 lease sales in the Gulf of Mexico region, 19 sales in the Alaska region, 9 lease sales in the Atlantic region, and 7 lease sales in the Pacific region. The proposed sales would cover all U.S. offshore areas not prohibited from oil and gas development, including areas with both high and low levels of estimated resources.⁶² The

⁵⁷ The fees are to be adjusted every five years based on the Consumer Price Index (30 U.S.C. §28 j (c)).

⁵⁸ OCSLA, 43 U.S.C. §§1331 et seq.

⁵⁹ BOEM, Combined Leasing Report as of December 1, 2018, at <https://www.boem.gov/December-2018-Combined-Leasing-Statistics/>. BOEM defines an "active lease" as one that has been executed by the lessor and lessee, has an effective date, and has not been relinquished, expired, or terminated. Not all active leases are producing oil and gas.

⁶⁰ BOEM, "2017-2022 Oil and Gas Leasing Program," at <http://www.boem.gov/Five-Year-Program-2017-2022/>.

⁶¹ BOEM, *2019-2024 National Outer Continental Shelf Oil and Gas Leasing: Draft Proposed Program*, January 2018, <https://www.boem.gov/NP-Draft-Proposed-Program-2019-2024/>. The proposed program follows on President Trump's Executive Order 13795 (Presidential Documents, "Implementing an America-First Offshore Energy Strategy," 82 *Federal Register* 20815-20818, May 3, 2017), which directed the Secretary of the Interior to review and consider revising the federal offshore oil and gas leasing schedule for 2017-2022 developed by the Obama Administration.

⁶² For a map showing BOEM's resource estimates for the four offshore regions, see BOEM, "Assessment of Undiscovered Technically Recoverable Oil and Gas Resources of the Nation's Outer Continental Shelf, 2016a," 2016, https://www.boem.gov/UTRR-Update_BTU/.

draft proposal is the first of three program versions; under the OCSLA process, subsequent versions could remove proposed lease sales but could not add new sales.⁶³

Under the OCSLA,⁶⁴ the President may withdraw unleased lands on the OCS from leasing disposition. President Obama indefinitely withdrew from leasing disposition large portions of the Arctic OCS as well as certain areas in the Atlantic region, but these withdrawals were modified by President Trump.⁶⁵ Congress also has established leasing moratoria; for example, the GOMESA established a moratorium on preleasing, leasing, and related activity in the eastern Gulf of Mexico through June 2022.⁶⁶

The 116th Congress may consider multiple issues related to offshore oil and gas exploration, including questions about allowing or prohibiting access to ocean areas and how such changes may impact domestic energy markets and affect the risk of oil spills. Other issues concern the use of OCS revenues and the extent to which they should be shared with coastal states (see “Federal Payment and Revenue-Sharing Programs” section).

Offshore Renewable Energy Sources

BOEM also is responsible for managing leases, easements, and rights-of-way to support development of energy from renewable ocean energy resources, including offshore wind, thermal power, and kinetic forces from ocean tides and waves.⁶⁷ As of January 2019, BOEM had issued 13 offshore wind energy leases in areas off the coasts of Massachusetts, Rhode Island, Delaware, Maryland, Virginia, New York, New Jersey, and North Carolina.⁶⁸ In December 2016, the first U.S. offshore wind farm, off the coast of Rhode Island, began regular operations. Issues for Congress include whether to take steps to facilitate the development of offshore wind and other renewables, such as through research and development, project loan guarantees, extension of federal tax credits for renewable energy production, or oversight of regulatory issues for these emerging industries.

The 13 leases include 11 individual lease sales and 2 noncompetitive leases. In addition, BOEM issued several “interim policy” leases for resource data collection and testing, prior to development of its renewable energy leasing regulations (see BOEM, “Interim Policy,” <http://www.boem.gov/Renewable-Energy-Interim-Policy/>).

Forest Management

Management of federal forests presents several policy questions for Congress. For instance, there are questions about the appropriate level of timber harvesting on federal forest lands, particularly FS and BLM lands, and how to balance timber harvesting against the other statutory uses and values for these federal lands. Further, Congress may debate whether or how the agencies use timber harvesting or other active forest management techniques to achieve other resource-management objectives, such as improving wildlife habitat or improving a forest's resistance and resilience to disturbance events (e.g., wildfire, ice storm).

FS manages 145 million acres of forests and woodlands in the National Forest System (NFS).⁶⁹ In FY2018, approximately 2.8 billion board feet of timber and other forest products were harvested from NFS lands, at a value of \$188.8 million.⁷⁰ BLM manages approximately 38 million acres of forest and woodlands.⁷¹ The vast majority are public domain forests, managed under the principles of multiple use and sustained yield as established by FLPMA.⁷² The 2.6 million acres of Oregon & California (O&C) Railroad Lands in western Oregon, however, are managed under a statutory direction for permanent forest production, as well as watershed protection, recreation, and contributing to the economic stability of local communities and industries.⁷³ In FY2018, approximately 177.8 million board feet of timber and other forest products were harvested from BLM lands, at a value of \$41.3 million.⁷⁴ The NPS and FWS have limited authorities to cut, sell, or dispose of timber from their lands and have established policies to do so only in certain cases, such as controlling for insect and disease outbreaks.

In the past few years, the ecological condition of the federal forests has been one focus of discussion. Many believe that federal forests are ecologically degraded, contending that decades of wildfire suppression and other forest-management decisions have created overgrown forests overstocked with biomass (fuels) that are susceptible to insect and disease outbreaks and can serve to increase the spread or intensity of wildfires. These observers advocate rapid action to improve forest conditions, including activities such as prescribed burning, forest thinning, salvaging dead and dying trees, and increased commercial timber production. Critics counter that authorities to reduce fuel levels are adequate, treatments that remove commercial timber degrade other ecosystem conditions and waste taxpayer dollars, and expedited processes for treatments may reduce public oversight of commercial timber harvesting. The 115th Congress enacted several provisions intended to expedite specific forest management projects on federal land and

⁶⁹ Sonja Oswalt, Patrick Miles, and Scott Pugh, et al., *Forest Resources of the United States, 2017: A Technical Document Supporting the Forest Service 2020 Update of the RPA Assessment*, USDA, FS, 2017, https://www.fia.fs.fed.us/program-features/rpa/docs/2017RPAFIATABLESFINAL_050918.pdf, hereinafter referred to as *Forest Resources of the United States, 2017*.

Range Management

Livestock Grazing

Management of federal rangelands, particularly by BLM and FS, presents an array of policy matters for Congress. Several issues pertain to livestock grazing. There is debate about the appropriate fee that should be charged for grazing private livestock on BLM and FS lands, including what criteria should prevail in setting the fee. Today, these federal agencies charge fees under a formula established by law in 1978, then continued indefinitely through an executive order issued by President Reagan in 1986.⁷⁶ The BLM and FS are generally charging a 2019 grazing fee of \$1.35⁷⁷ per animal unit month (AUM)⁷⁸ for grazing on their lands. Conservation groups, among others, generally seek increased fees to recover program costs or approximate market value, whereas livestock producers who use federal lands want to keep fees low to sustain ranching and rural economies.

The BLM and FS issue to ranchers permits and/or leases that specify the terms and conditions for grazing on agency lands. Permits and leases generally cover a 10-year period and may be renewed. Congress has considered whether to extend the permit/lease length (e.g., to 20 years) to strengthen the predictability and continuity of operations. Longer permit terms have been opposed because they potentially reduce the opportunities to analyze the impact of grazing on lands and resources.

The effect of livestock grazing on rangelands has been part of an ongoing debate on the health and productivity of rangelands. Due to concerns about the impact of grazing on rangelands, some recent measures would restrict or eliminate grazing, for instance, through voluntary retirement of permits and leases and subsequent closure of the allotments to grazing. These efforts are opposed

⁷⁵ These provisions were enacted as part of the Agriculture Improvement Act of 2018 (P.L. 115-334, also known as the 2018 farm bill, Title VIII) and the Consolidated Appropriations Act, 2018 (P.L. 115-141, Division O).

⁷⁶ P.L. 95-514, 92 Stat. 1803; 43 U.S.C. §§1901, 1905. Executive Order 12548, 51 *Federal Register* 5985 (February 19, 1986).

⁷⁷ This fee is in effect from March 1, 2019, through February 29, 2020.

⁷⁸ BLM defines an AUM, for fee purposes, as a month's use and occupancy of the range by one animal unit, which includes one yearling, one cow and her calf, one horse, or five sheep or goats. The FS uses head-month (HD-MO) as its measurement for use and occupancy of FS lands. AUM is used in this report to cover both HD-MO and AUM.

by those who assert that ranching can benefit rangelands and who support ranching on federal lands for not only environmental but lifestyle and economic reasons. Another focus of the discussion on range health and productivity is the spread of invasive and noxious weeds. (See “Invasive Species” section, below.)

Wild Horses and Burros

There is continued congressional interest in management of wild horses and burros, which are protected on BLM and FS lands under the Wild Free-Roaming Horses and Burros Act of 1971.⁷⁹ Under the act, the agencies inventory horse and burro populations on their lands to determine appropriate management levels (AMLs). Most of the animals are on BLM lands, although both BLM and FS have populations exceeding their national AMLs. BLM estimates the maximum AML at 26,690 wild horses and burros, and it estimates population on the range at 81,951.⁸⁰ Furthermore, off the range, BLM provides funds to care for 50,864 additional wild horses and burros in short-term corrals, long-term (pasture) holding facilities, and eco-sanctuaries.⁸¹ The Forest Service estimates population on lands managed by the agency at 9,300 wild horses and burros.⁸²

The agencies are statutorily authorized to remove excess animals from the range and use a variety of methods to meet AML. This includes programs to adopt and sell animals, to care for animals off-range, to administer fertility control, and to establish ecosanctuaries. Questions for Congress include the sufficiency of these authorities and programs for managing wild horses and burros. Another controversial question is whether the agencies should humanely destroy excess animals, as required under the 1971 law, or whether Congress should continue to prohibit the BLM from using funds to slaughter healthy animals. Additional topics of discussion center on the costs of management, particularly the relatively high cost of caring for animals off-range.⁸³ Other options focus on keeping animals on the range, such as by expanding areas for herds and/or changing the method for determining AML.

Recreation

The abundance and diversity of recreational uses of federal lands and waters has increased the challenge of balancing different types of recreation with each other and with other land uses. One

⁷⁹ 16 U.S.C. §§1331 et seq.

⁸⁰ These figures are current as of March 1, 2018. See BLM, *On-Range Population Estimate as of March 1, 2018*, <https://www.blm.gov/programs/wild-horse-and-burro/about-the-program/program-data>.

⁸¹ BLM, *Wild Horses and Burros Under BLM Care*, December 2018, <https://www.blm.gov/programs/wild-horse-and-burro/about-the-program/program-data>.

⁸² This estimate was provided to CRS by the Forest Service, and reflects animals on FS lands in 2018.

⁸³ About three-fifths of BLM’s overall funding for wild horses and burros is used to care for animals off-range. For instance, in FY2017 BLM expenditures for wild horse and burro management totaled \$81.5 million, of which \$47.5 million (58%) was used for off-range care.

issue is how—or whether—fees should be collected for recreational activities on federal lands. The Federal Lands Recreation Enhancement Act (FLREA) established a recreation fee program for the four FLMAs and the Bureau of Reclamation.⁸⁴ The authorization ends on September 30, 2020.⁸⁵ FLREA authorizes the agencies to charge, collect, and spend fees for recreation on their lands, with most of the money remaining at the collecting site. The 116th Congress faces issues including whether to let lapse, extend, make permanent, or amend the program. Current oversight issues for Congress relate to various aspects of agency implementation of the fee program, including the determination of fee changes, use of collected revenue, and pace of obligation of fee collections. Supporters of the program contend that it sets fair and similar fees among agencies and keeps most fees on-site for improvements that visitors desire. Some support new or increased fees or full extension of the program to other agencies, especially the U.S. Army Corps of Engineers. Among critics, some oppose recreation fees in general. Others assert that fees are appropriate for fewer agencies or types of lands, that the fee structure should be simplified, or that more of the fees should be used to reduce agency maintenance backlogs.

Another contentious issue is the use of off-highway vehicles (OHVs)—all-terrain vehicles, snowmobiles, personal watercraft, and others—on federal lands and waters. OHV use is a popular recreational activity on BLM and FS land, while NPS and FWS have fewer lands allowing them. OHV supporters contend that the vehicles facilitate visitor access to hard-to-reach natural areas and bring economic benefits to communities serving riders. Critics raise concerns about disturbance of nonmotorized recreation and potential damage to wildlife habitat and ecosystems. Issues for Congress include broad questions of OHV access and management, as well as OHV use at individual parks, forests, conservation areas, and other federal sites.

Access to opportunities on federal lands for hunting, fishing, and recreational shooting (e.g., at shooting ranges) is of perennial interest to Congress. Hunting and fishing are allowed on the majority of federal lands, but some contend they are unnecessarily restricted by protective designations, barriers to physical access, and agency planning processes. Others question whether opening more FLMA lands to hunting, fishing, and recreational shooting is fully consistent with good game management, public safety, other recreational uses, resource management, and the statutory purposes of the lands. Issues for Congress include questions of whether or how to balance hunting and fishing against other uses, as well as management of equipment used for hunting and fishing activities, including types of firearms and composition of ammunition and fishing tackle.

⁸⁵ FLREA has been extended by a series of laws, most recently P.L. 116-6.

Other Land Designations

Congress, the President, and some executive branch officials may establish individual designations on federal lands. Although many designations are unique, some have been more commonly applied, such as national recreation area, national scenic area, and national monument. Congress has conferred designations on some nonfederal lands, such as national heritage areas, to commemorate, conserve, and promote important natural, scenic, historical, cultural, and recreational resources. Congress and previous Administrations also have designated certain offshore areas as marine national monuments or sanctuaries. Controversial issues involve the types, locations, and management of such designations, and the extent to which some designations should be altered, expanded, or reduced.

In addition, Congress has created three cross-cutting systems of federal land designations to preserve or emphasize particular values or resources, or to protect the natural conditions for biological, recreation, or scenic purposes. These systems are the National Wilderness Preservation System, the National Wild and Scenic Rivers System, and the National Trails System. The units of these systems can be on one or more agencies' lands, and the agencies manage them within parameters set in statute.

National Monuments and the Antiquities Act

The Antiquities Act of 1906 authorizes the President to proclaim national monuments on federal lands that contain historic landmarks, historic and prehistoric structures, or other objects of natural, historic, or scientific interest.⁸⁶ The President is to reserve “the smallest area compatible with the proper care and management of the objects to be protected.”⁸⁷ Seventeen of the 20 Presidents since 1906, including President Trump, have used this authority to establish, enlarge, diminish, or make other changes to proclaimed national monuments. Congress has modified many of these proclamations, abolished some monuments, and created monuments under its own authority.

Since the enactment of the Antiquities Act, presidential establishment of monuments sometimes has been contentious. Most recently, the Trump Administration has reviewed and recommended changes to some proclaimed national monuments,⁸⁸ and President Trump has modified and established some monuments.

⁸⁶ 54 U.S.C. §320301.

⁸⁷ 54 U.S.C. §320301(b).

⁸⁸ On December 5, 2017, the Department of the Interior (DOI) released a final report of the Secretary of the Interior on a review of certain national monuments. A link to the final report is in a DOI press release at <https://www.doi.gov/pressreleases/secretary-zinke-recommends-keeping-federal-lands-federal-ownership-adding-three-new>.

Congress continues to address the role of the President in proclaiming monuments. Some seek to impose restrictions on the President's authority to proclaim monuments. Among the bills considered in recent Congresses are those to block monuments from being declared in particular states; limit the size or duration of withdrawals; require the approval of Congress, the pertinent state legislature, or the pertinent governor before a monument could be proclaimed; or require the President to follow certain procedures prior to proclaiming a new monument.

Others promote the President's authority to act promptly to protect valuable resources on federal lands that may be vulnerable, and they note that Presidents of both parties have used the authority for over a century. They favor the Antiquities Act in its present form, asserting that the courts have upheld monument designations and that large segments of the public support monument designations for the recreational, preservation, and economic benefits that such designations can bring.

Wilderness and Roadless Areas

In 1964, the Wilderness Act created the National Wilderness Preservation System, with statutory protections that emphasize preserving certain areas in their natural states. Units of the system can be designated only by Congress. Many bills to designate wilderness areas have been introduced in each Congress. As of March 1, 2019, there were 802 wilderness areas, totaling over 111 million acres in 44 states (and Puerto Rico) and managed by all four of the FLMAs.⁸⁹ A wilderness designation generally prohibits commercial activities, motorized access, and human infrastructure from wilderness areas, subject to valid existing rights. Advocates propose wilderness designations to preserve the generally undeveloped conditions of the areas. Opponents see such designations as preventing certain uses and potential economic development in rural areas where such opportunities are relatively limited.

Designation of new wilderness areas can be controversial, and questions persist over the management of areas being considered for wilderness designation. FS reviews the wilderness potential of NFS lands during the forest planning process and recommends any identified potential wilderness areas for congressional consideration.⁹⁰ Management activities or uses that may reduce the wilderness potential of a recommended wilderness area may be restricted.⁹¹

Questions also persist over BLM wilderness study areas (WSAs).⁹² These WSAs are the areas BLM studied as potential wilderness and made subsequent recommendations to Congress

⁸⁹ These figures include the designation of 35 new wilderness areas and additions to 6 existing wilderness areas enacted as part of the John D. Dingell, Jr. Conservation, Management, and Recreation Act (P.L. 116-9).

⁹⁰ 36 C.F.R. §219.7(c)(v).

⁹¹ 36 C.F.R. §219.10(b)(iv).

⁹² Here, WSAs refer to lands identified through an administrative process by BLM. However, Congress has also established some WSAs through statute on BLM, FWS, and FS lands.

regarding their suitability for designation as wilderness. BLM is required by FLPMA to protect the wilderness characteristics of WSAs, meaning that many uses in these areas are restricted or prohibited. Congress has designated some WSAs as wilderness, and has also included legislative language releasing BLM from the requirement to protect the wilderness characteristics of other WSAs.

FS also manages approximately 58 million acres of lands identified as “inventoried roadless areas.”⁹³ These lands are not part of the National Wilderness Preservation System, but certain activities—such as road construction or timber harvesting—are restricted on these lands, with some exceptions. The Clinton and George W. Bush Administrations each promulgated different roadless area regulations. Both were heavily litigated; however, the Clinton policy to prohibit many activities on roadless areas remains intact after the Supreme Court refused to review a lower court’s 2012 decision striking down the Bush rule.⁹⁴ In 2018, the Forest Service initiated a rulemaking process to develop a new roadless rule specific to the national forests in the state of Alaska.⁹⁵

The National Wild and Scenic Rivers System and the National Trails System

Congress established the National Wild and Scenic Rivers System with the passage of the Wild and Scenic Rivers Act of 1968.⁹⁶ The act established a policy of preserving designated free-flowing rivers for the benefit and enjoyment of present and future generations. River units designated as part of the system are classified and administered as wild, scenic, or recreational rivers, based on the condition of the river, the amount of development in the river or on the shorelines, and the degree of accessibility by road or trail at the time of designation. The system contains both federal and nonfederal river segments. Typically, rivers are added to the system by an act of Congress, but may also be added by state nomination with the approval of the Secretary of the Interior. As of March 1, 2019, there are more than 200 river units with roughly 13,300 miles in 40 states and Puerto Rico, administered by all four FLMAs, or by state, local, or tribal governments.⁹⁷

⁹³ This figure, 58 million acres, is the reported and estimated acreage of inventoried roadless areas as published in 36 C.F.R. §294. This figure has not been updated since 2001 and does not reflect any acreage adjustments since that time, such as if Congress designated a new wilderness area from within an inventoried roadless area.

⁹⁴ *Wyoming v. Department of Agriculture*, 133 S.Ct. 417 (2012). The Clinton roadless policy does not apply to Colorado or Idaho; roadless areas within the national forests within those states are subject to statewide regulations developed under the Bush roadless rule.

⁹⁵ Forest Service, “Roadless Area Conservation; National Forest System Lands in Alaska,” 83 *Federal Register* 169, August 30, 2018.

⁹⁶ P.L. 90-542, 16 U.S.C. §1271 et seq.

⁹⁷ These figures were calculated by CRS using figures reported in legislative text and river management plans, as available, and reflect additions to the system added by as part of the John D. Dingell, Jr. Conservation, Management, and Recreation Act (P.L. 116-9).

Designation and management of lands within river corridors has been controversial in some cases. Issues include concerns about private property rights and water rights within designated river corridors. Controversies have arisen over state or federal projects prohibited within a corridor, such as construction of major highway crossings, bridges, or other activities that may affect the flow or character of the designated river segment. The extent of local input in developing river management plans is another recurring issue.

The National Trails System Act of 1968 authorized a national system of trails, across federal and nonfederal lands, to provide additional outdoor recreation opportunities and to promote access to the outdoor areas and historic resources of the nation.⁹⁸ The system today consists of four types of trails and can be found in all 50 states, the District of Columbia, and Puerto Rico. This includes 11 national scenic trails and 19 national historic trails that covers roughly 55,000 miles.⁹⁹ In addition, almost 1,300 national recreation trails and 7 connecting-and-side trails have been established administratively as part of the system. National trails are administered by NPS, FS, and BLM, in cooperation with appropriate state and local authorities. Most recreation uses are permitted, as are other uses or facilities that do not substantially interfere with the nature and purposes of the trail. However, motorized vehicles are prohibited on many trails.

Ongoing issues for Congress include whether to designate additional trails, whether or how to balance trail designation with other potential land uses, what activities should be permitted on trails, and what portion of trail funding should be from federal versus nonfederal sources. Some Members have expressed interest in new types of trails for the system, such as “national discovery trails,” which would be interstate trails connecting representative examples of metropolitan, urban, rural, and backcountry regions.

National Marine Sanctuaries and Marine National Monuments

The National Marine Sanctuaries Act (NMSA)¹⁰⁰ authorizes the National Oceanic and Atmospheric Administration (NOAA) to designate specific areas for protection of their ecological, aesthetic, historical, cultural, scientific, or educational qualities. The NOAA Office of National Marine Sanctuaries serves as the trustee for the 13 national marine sanctuaries (NMSs) designated under NMSA. Sanctuaries are located in marine areas and waters under state or federal jurisdiction. Sites are designated for specific reasons, such as protecting cultural artifacts (e.g., sunken vessels), particular species (e.g., humpback whales), or unique areas and entire ecosystems (e.g., Monterey Bay). Two areas currently under consideration for designation are Mallows Bay, Potomac River, MD, and Lake Michigan, WI.¹⁰¹

⁹⁸ P.L. 90-543; 16 U.S.C. §1241 et seq.

⁹⁹ These figures were calculated by CRS using figures reported in legislative text and totals reported by the National Park Service, as available, and reflect additions to the system added by as part of the John D. Dingell, Jr. Conservation, Management, and Recreation Act (P.L. 116-9).

¹⁰⁰ National Marine Sanctuaries Act, 16 U.S.C. §1431 et seq.

¹⁰¹ See Sanctuary Nomination Process at <https://www.nominate.noaa.gov/nominations/> and Sanctuary Designation

The NMSA requires the development and implementation of management plans for each sanctuary, which provide the basis for managing or limiting incompatible activities. For most NMSs, questions related to developing or amending management plans have focused on identifying and limiting incompatible activities.

Five large marine national monuments have been designated by the President under the Antiquities Act, the most recent being the Northeast Canyons and Seamounts Marine National Monument in 2016,¹⁰² the first designated in the Atlantic Ocean.¹⁰³ Within the monuments, the removing, taking, harvesting, possessing, injuring, or damaging of monument resources is prohibited except as provided under regulated activities. For example, some exceptions have been provided for recreational fishing and subsistence use within certain marine national monuments. All five marine national monuments are managed cooperatively by the Department of the Interior (FWS) and Department of Commerce (NOAA).¹⁰⁴

One of the main differences between national marine sanctuaries and marine national monuments is their designation process. While monuments are designated by presidential proclamation or through congressional legislation, the NMS designation process is an administrative action, requiring nomination, public scoping, public comment, and congressional and state review prior to the Secretary of Commerce's approval of the designation. Some stakeholders from extractive industries, such as the fishing industry, have voiced concerns that the national monument designation process does not provide opportunities to examine the tradeoffs between resource protection and resource use. On the other hand, some environmentalists have voiced concerns with the low number of NMS designations and what they see as inadequate protection of some sanctuary resources, such as fish populations. Some observers question whether the overriding purpose of the NMSA is to preserve and protect marine areas or to create multiple use management areas.¹⁰⁵ Most agree that the designation and management of national marine sanctuaries and marine national monuments will continue to inspire debate over the role of marine protected areas. The Trump Administration has reviewed and recommended changes to the size and management of some marine national monuments.¹⁰⁶

Species Management

Each FLMA has a responsibility to manage the plant and animal resources under its purview. An agency's responsibilities may be based on widely applicable statutes or directives, including the Endangered Species Act, the Migratory Bird Treaty Act, the Fish and Wildlife Coordination Act, executive orders, and other regulations. Species management could also be based on authorities

Process at <https://sanctuaries.noaa.gov/management/designations.html>.

¹⁰⁶ These reviews were ordered by Executive Order 13795, Presidential Documents, "Implementing an America-First Offshore Energy Strategy," 82 *Federal Register* 20815-20818, May 3, 2017; and Executive Order 13792, Presidential Documents, "Review of Designations under the Antiquities Act," 82 *Federal Register* 20429- 20431, May 1, 2017. On December 5, 2017, the Department of the Interior (DOI) released a final report of the Secretary of the Interior on a review of certain national monuments. A link to the final report is in a DOI press release at <https://www.doi.gov/pressreleases/secretary-zinke-recommends-keeping-federal-lands-federal-ownership-adding-three-new>.

specific to each FLMA. In addition, each FLMA must work closely with state authorities to address species management issues.

In the case of the National Wildlife Refuge System (administered by FWS), the conservation of plants and animals is the mission of the system, and other uses are allowed to the extent they are compatible with that mission and any specific purposes of an individual system unit.¹⁰⁷ While most refuges are open for public enjoyment, some refuges or parts of refuges (such as island seabird colonies) might be closed to visitors to preserve natural resources. For the National Park System, resource conservation (including wildlife resources) is part of the National Park Service's dual mission, shared with the other goal of public enjoyment.¹⁰⁸ The FS and BLM have *multiple use* missions, with species management being one of several agency responsibilities.¹⁰⁹

The federal land management agencies do not exercise their wildlife authorities alone. Often, Congress has directed federal agencies to share management of their wildlife resources with state agencies.¹¹⁰ For example, where game species are found on federal land and hunting is generally allowed on that land, federal agencies work with states on wildlife censuses and require appropriate state licenses to hunt on the federal lands.¹¹¹ In addition, federal agencies often cooperate with states to enhance wildlife habitat for the benefit of both jurisdictions.

The four FLMAs do not each maintain specific data on how many acres of land are open to hunting, fishing, and recreational shooting. However, both BLM and FS are required to open lands under their administration to hunting, fishing, and recreational shooting, subject to any existing and applicable law, unless the respective Secretary specifically closes an area.¹¹² Both agencies estimate that nearly all of their lands are open to these activities.¹¹³ FWS is required to report the number of refuges open to hunting and fishing as well as the acreage available for hunting on an annual basis.¹¹⁴ As of FY2017, there were 277 refuges open to fishing and 336 refuges open to hunting, providing access to 86 million acres for hunting.¹¹⁵ Congress frequently

¹⁰⁷ National Wildlife Refuge System Administration Act of 1966, 16 U.S.C. §668dd et seq. Preexisting rights that were not acquired (e.g., in a split estate where FWS acquires surface rights but not mineral rights) may also affect what may occur on FWS lands.

¹⁰⁸ The National Park Service Organic Act of 1916, 54 U.S.C. §100101.

¹⁰⁹ For BLM, see the Federal Land Management and Policy Act, 16 U.S.C. §§1701 and 1702. For FS, see 16 U.S.C. §§528-531.

¹¹⁰ For example, the National Wildlife Refuge System Administration Act states “Nothing in this Act shall be construed as affecting the authority, jurisdiction, or responsibility of the several States to manage, control, or regulate fish and resident wildlife under State law or regulations in any area within the System. Regulations permitting hunting or fishing of fish and resident wildlife within the System shall be, to the extent practicable, consistent with State fish and wildlife laws, regulations, and management plans” (16 U.S.C. §668dd(m)).

¹¹¹ While state licenses are generally required to hunt and fish on federal lands, there are some exceptions. For example, select NPS units do not require state licenses for fishing.

¹¹² This requirement was added by the John D. Dingell, Jr. Conservation, Management, and Recreation Act (P.L. 116-9 §4102). However, the requirement is prospective and does not retroactively open any lands that are closed as of the date of enactment (February 26, 2019). §4103 outlines the required procedures for closing lands to these activities.

¹¹³ BLM estimates that 99% of its lands are open to hunting, fishing and recreational shooting (BLM, *Recreation Programs*, <https://www.blm.gov/programs/recreation/recreation-programs/recreational-shooting>). FS estimates that 99% of its lands are open to hunting, and at least 99% of FS administered rivers, streams, and lakes are open to fishing (personal communication between CRS and FS, February, 2018). For more information on hunting and fishing on federal lands, see CRS Report R45103, *Hunting and Fishing on Federal Lands and Waters: Overview and Issues for Congress*, by R. Eliot Crafton.

¹¹⁴ P.L. 113-264 amended the Migratory Bird Hunting and Conservation Stamp Act (16 U.S.C. §718d) to mandate that the FWS annually publishes the number of acres open to hunting and fishing within the NWRS.

¹¹⁵ FWS, *FY2017 Annual Report: Migratory Bird Conservation Commission*, p. 38, <https://www.fws.gov/refuges/>

considers species management issues, such as balancing land and resources use, providing access to hunting and fishing on federal lands, and implementing endangered species protections.

Endangered Species

The protection of endangered and threatened species—under the 1973 Endangered Species Act (ESA)¹¹⁶—can be controversial due to balancing the needs for natural resources use and development and species protection. Under the ESA, all federal agencies must “utilize their authorities in furtherance of the purposes of this Act by carrying out programs for the conservation of endangered species and threatened species listed pursuant to ... this Act.”¹¹⁷ As a result, the FLMAs consider species listed as threatened or endangered in their land management plans, timber sales, energy or mineral leasing plans, and all other relevant aspects of their activities that might affect listed species. They consult with FWS (or NMFS, for most marine species and for anadromous fish such as salmon) about those effects. The majority of these consultations result in little or no change in the actions of the land managers.

Congress has considered altering ESA implementation in various ways. For example, bills were introduced in the 115th Congress that would have redefined the process for listing a species, defined the types of data used to evaluate species, and changed the types of species that can be listed under ESA, among others. Debate has also centered on certain species, particularly where conservation of species generates conflict over resources in various habitats. Examples of these species include sage grouse (energy and other resources in sage brush habitat), grey wolves (ranching), and polar bears (energy development in northern Alaska), among others. Proposals resulting from issues regarding certain species include granting greater authority to states over whether a species may be listed, changing the listing status of a species, and creating special conditions for the treatment of a listed species.

CRS Report RL32992, *The Endangered Species Act and “Sound Science,”* by Pervaze A. Sheikh.

CRS Report R40787, *Endangered Species Act (ESA): The Exemption Process*, by Pervaze A. Sheikh.

Invasive Species

While habitat loss is a major factor in the decline of species, invasive species have long been considered the second-most-important factor.¹¹⁸ Invasive species—nonnative or alien species that cause or are likely to cause harm to the environment, the economy, or human health upon introduction, establishment, and spread—have the potential to affect habitats and people across

realty/pdf/MBCC_2017.pdf. The numbers provided herein do not include hunting and fishing opportunities in wetland management districts that are also part of the NWRS. In FY2017 there were a total of 566 refuges. One additional refuge was added to the system in 2018, bringing the current total to 567.

¹¹⁶ P.L. 93-205, as amended; 16 U.S.C. §§1531-1543.

¹¹⁷ 16 U.S.C. §1536(a).

¹¹⁸ For example, see Randy G. Westbrooks, *Invasive Plants: Changing the Landscape of America*, Federal Interagency Committee for the Management of Noxious and Invasive Weeds, Washington, DC, 1998, p. 5.

the United States and U.S. territories, including on federal lands and waters.¹¹⁹ For example, gypsy moths have been a pest in many eastern national forests as well as Shenandoah National Park. A fungus causing white-nose syndrome has caused widespread mortality in bat populations in the central and eastern states, including those in caves on national park and national forest lands. Burmese pythons prey on native species of birds, mammals, and reptiles in south Florida, including in the Everglades National Park. Many stakeholders believe the most effective way to deal with invasive species is to prevent their introduction and spread. For species already introduced, finding effective management approaches is important, though potentially difficult or controversial. Control efforts can be complex and expensive, and may require collaboration and coordination between multiple stakeholders.

Addressing invasive species is a responsibility shared by several federal agencies, in addition to the FLMAs.¹²⁰ These agencies are required to plan and carry out control activities and to develop strategic plans to implement such activities.¹²¹ Control activities are required to manage invasive populations, prevent or inhibit the introduction and spread of invasive species, and to restore impacted areas. Further, agencies must consider both ecological and economic aspects in developing their strategic plans and implementing control activities, and they must coordinate with state, local, and tribal representatives. Legislation to address the introduction and spread of invasive species as well as the impacts that arise from these species is of perennial interest to Congress.

Wildfire Management

Wildfire is a concern because it can lead to loss of human life, damage communities and timber resources, and affect soils, watersheds, water quality, and wildlife. Management of wildfire—an unplanned and unwanted wildland fire—includes preparedness, suppression, fuel reduction, site

¹¹⁹ The introduction and spread of invasive species also can result in economic impacts, with potential related costs estimated by some as exceeding \$100 billion per year. For example, see David Pimentel, Rodolfo Zuniga, and Doug Morrison, “Update on the Environmental and Economic Costs Associated with Alien-invasive Species in the United States,” *Ecological Economics*, vol. 52, no. 3 (February 15, 2005), pp. 273-288.

¹²⁰ The John D. Dingell, Jr. Conservation, Management, and Recreation Act (P.L. 116-9, §7001) adds a general authority and requirement for the FLMAs, the Bureau of Indian Affairs and Bureau of Reclamation (both in DOI), and the Army Corps of Engineers to address invasive species on the lands in their jurisdiction. Other statutes address management of specific species groups (for example, noxious weeds; 7 U.S.C. §2814 and 7 U.S.C. §§7781-7786) or habitats (for example, aquatic habitats; 16 U.S.C. §§4701-4751). In addition, addressing invasive species has also been considered through administrative mechanisms, including executive orders (for example, Executive Order 13112, “Invasive Species,” 64 *Federal Register* 6183-6186, February 8, 1999).

¹²¹ P.L. 116-9 §7001.

rehabilitation, and more.¹²² A record-setting 10.1 million acres burned in 2015 due to wildfire, and 10.0 million acres burned two years later in 2017.¹²³ In 2018, 8.8 million acres burned.

The federal government is responsible for managing wildfires that begin on federal land. FS and DOI have overseen wildfire management, with FS receiving approximately two-thirds of federal funding.¹²⁴ Wildfire management funding—including supplemental appropriations—has averaged \$3.8 billion annually over the last 10 years (FY2009 through FY2018), ranging from a low of \$2.7 billion in FY2012 to a high of \$4.9 billion in both FY2016 and FY2018.¹²⁵

Congressional activity regarding wildfire management typically peaks during the fire season, and during the early part of the budget process.¹²⁶ Legislative issues for Congress include oversight of the agencies' fire management activities and other wildland management practices that have altered fuel loads over time, and consideration of programs and processes for reducing fuel loads. Funding also is a perennial concern, particularly for suppression purposes, an activity for which costs are generally rising but vary annually and are difficult to predict. The 115th Congress enacted a new adjustment to the discretionary spending limits for wildfire suppression operations, starting in FY2020.¹²⁷ This means that Congress can appropriate some wildfire suppression funds—subject to certain criteria—effectively outside of the discretionary spending limits. There is also congressional interest in the federal roles and responsibilities for wildfire protection, response, and damages, including activities such as air tanker readiness and efficacy and liability issues. Other issues include the use of new technologies for wildfire detection and response, such as unmanned aircrafts. Another issue is the impact of the expanding wildland-urban interface (WUI), which is the area where structures (usually homes) are intermingled with or adjacent to vegetated wildlands (forests or rangelands).¹²⁸ The proximity to vegetated landscapes puts these areas at a potential risk of experiencing wildfires and associated damage. Approximately 10% of all land within the lower 48 states is classified as WUI.¹²⁹

¹²² Preparedness is the range of tasks necessary to build, sustain, and improve the capability to protect against, respond to, and recover from wildfire incidents. Suppression is the work associated with extinguishing or confining a fire. Fuel reduction is manipulation, including combustion, or removal of fuels to reduce the likelihood of ignition and/or to lessen potential damage and resistance to control. Site rehabilitation is efforts undertaken generally within three years of a wildfire to repair or improve fire-damaged lands unlikely to recover to a management-approved condition, or to repair or replace minor facilities damaged by fire.

¹²³ Historical fire statistics were first reported in 1960. After 2015 and 2017, the next-largest fire year on record for acres burned was in 2006 (9.9 million acres). National Interagency Fire Center, *Total Wildland Fires and Acres (1960-2017)*, http://www.nifc.gov/fireInfo/fireInfo_stats_totalFires.html.

¹²⁴ Funding for federal wildfire management is generally provided through the Interior, Environment and Related Agencies appropriations bill.

¹²⁵ Figures reported in nominal dollars.

¹²⁶ The fires season generally starts in mid- or late summer and ends in mid- or late fall. Factors such as wind, drought, precipitation events from the previous year, and more contribute to the length and severity of the fire season.
