AGENCY; and **LISA JACKSON**,)
27 Administrator, U.S. EPA;)
28 Defendants.)

Case No. _____

**COMPLAINT FOR DECLARATORY
AND INJUNCTIVE RELIEF**

1 **INTRODUCTION**

2 1. This action challenges the failure of Defendants Environmental Protection Agency and
3 Lisa Jackson, Environmental Protection Agency Administrator, (collectively “EPA”) to consult with the
4 United States Fish and Wildlife Service (“FWS”) and National Marine Fisheries Service (“NMFS”)
5 (collectively “Service”) pursuant to Section 7(a)(2) of the Endangered Species Act (“ESA”), 16 U.S.C.
6 § 1536(a)(2), regarding the effects of EPA-registered pesticides on endangered and threatened species
7 throughout the United States of America.

8 2. Consultation with the Service is necessary to ensure that EPA’s oversight of pesticides
9 does not jeopardize the continued existence of any endangered or threatened species or result in the
10 destruction or adverse modification of designated critical habitat of these species. 16 U.S.C. §
11 1536(a)(2). If EPA engaged in consultation as required, the Service would assess how pesticides are
12 affecting listed species and their habitats and, if necessary, would suggest reasonable and prudent
13 alternatives to protect the species. 16 U.S.C. § 1536(a)(3).

14 3. The Center for Biological Diversity (“the Center”) and Pesticide Action Network North
15 America (“PANNA”) (collectively “Plaintiffs”) seek an order declaring that EPA has violated Section
16 7(a)(2) of the ESA by failing to undergo consultation with the Service concerning pesticide impacts on
17 endangered and threatened species in the United States. Plaintiffs seek an order compelling EPA to
18 initiate and complete this consultation process. Plaintiffs also seek an order enjoining EPA from
19 allowing pesticide uses that may result in pesticides entering occupied habitat or designated critical
20 habitat of endangered and threatened species until the consultation process has been completed and
21 EPA has brought its pesticide registrations into compliance with Section 7(a)(2) of the ESA.

22 **JURISDICTION AND VENUE**

23 4. The Court has jurisdiction over this action by virtue of 28 U.S.C. § 1331 because
24 Plaintiffs allege violations of federal law. The Court is authorized to provide declaratory and injunctive
25 relief pursuant to 28 U.S.C. §§ 2201 - 2202. The ESA’s citizen suit provision, 16 U.S.C. § 1540(g),
26 authorizes the Court to enjoin violations of the ESA and its implementing regulations.

1 5. As required by the ESA, 16 U.S.C. § 1540(g)(2)(A), Plaintiffs provided EPA with at least
2 60 days notice of their intent to sue by sending letters to EPA on January 27, 2010; March 16, 2010;
3 and May 20, 2010.

4 6. EPA has not remedied the violations set out in the 60-day notices.

5 7. Venue lies in this Court pursuant to 28 U.S.C. § 1391(e) as Plaintiffs reside in this
6 judicial district and no real property is involved. In addition, under 16 U.S.C. § 1540(g)(3)(A), this
7 lawsuit may be brought in this judicial district because Defendants' violations of the ESA have occurred
8 in this district.

9 **INTRADISTRICT ASSIGNMENT**

10 8. Pursuant to Civil Local Rules 3-2(c) and 3-2(d), this action is properly assigned to either
11 the San Francisco or Oakland Division of this Court because Plaintiffs reside in and maintain offices in
12 San Francisco County.

13 **PARTIES**

14 9. Plaintiff CENTER FOR BIOLOGICAL DIVERSITY is a non-profit corporation with
15 offices in San Francisco, Joshua Tree, and Los Angeles, California; Portland, Oregon; Silver Springs,
16 New Mexico; Tucson and Flagstaff, Arizona; Anchorage, Alaska; Brooklyn, New York; Richmond,
17 Vermont; Seattle, Washington; Minneapolis and Duluth, Minnesota; Las Vegas, Nevada; and
18 Washington, D.C. The Center is actively involved in species and habitat protection issues throughout
19 the United States, including the U.S. territories, as well as outside of the United States. The Center has
20 42,000 members that live throughout the United States, including in San Francisco.

21 10. Plaintiff PESTICIDE ACTION NETWORK NORTH AMERICA is a non-profit, public
22 interest organization in San Francisco. PANNA is one of five independent regional centers of Pesticide
23 Action Network International, a network of more than 600 organizations in 90 countries. Pesticide
24 Action Network has 22,000 members and more than 100 organizational partners across the United
25 States, working to replace the most hazardous pesticides with ecologically sound, socially just
26 alternatives that protect people and the environment. For 28 years, Pesticide Action Network has
27 fought to preserve ecosystems, biodiversity, sustainable agriculture, and community food security.

1 11. Plaintiffs' members live, work, visit, recreate, and otherwise enjoy areas across the nation
2 that are impacted by the pesticides at issue in this Complaint. Plaintiffs' members derive professional,
3 aesthetic, spiritual, recreational, economic, and educational benefits from the endangered and threatened
4 species that live in these areas. Plaintiffs' members engage in wildlife observation, research,
5 photography, restoration activities, and educational programs involving endangered and threatened
6 species that are impacted by the pesticides at issue in this Complaint. Plaintiffs and their members have
7 participated and continue to participate in efforts to protect these species and their habitats. Plaintiffs'
8 members will continue to maintain an interest in these species and areas in the future.

9 12. The above-described interests of Plaintiffs and their members have been and are being
10 adversely affected by EPA's registration, authorization, and oversight of pesticides known to be
11 harmful to endangered and threatened species and their habitats. EPA must register and authorize
12 pesticides before they can be used. Once in the environment, pesticides impact species through acute
13 and chronic effects, and contamination of their habitats. Absent EPA's registration and oversight of
14 pesticides, they could not be used and would not be negatively impacting listed species. EPA's failure
15 to ensure that its actions regarding pesticides do not impact endangered species and their habitats harms
16 Plaintiffs' members' interests in the species. If EPA engaged in consultation as required, the Service
17 would detail how the pesticides are affecting listed species and their habitats and, if necessary, would
18 suggest reasonable and prudent alternatives to protect the species. 16 U.S.C. § 1536(a)(3).

19 13. Unless the requested relief is granted, Plaintiffs' interests will continue to be injured by
20 EPA's failure to consult with the Service, as well as by the ongoing harm to these species and their
21 habitats as a result of ongoing pesticide use. The injuries described above are actual, concrete injuries
22 that are presently suffered by Plaintiffs and their members and will continue to occur unless relief is
23 granted by this Court. These injuries are directly caused by the Defendants' failure to consult with the
24 Service to ensure that their actions do not affect listed species. The relief sought herein, EPA's
25 compliance with the ESA, would redress Plaintiffs' injuries. Plaintiffs have no other adequate remedy
26 at law, and they bring this action on behalf of their adversely affected members.

27 14. Defendant ENVIRONMENTAL PROTECTION AGENCY is the federal agency charged
28 with registering pesticides under the Federal Insecticide, Fungicide, and Rodenticide Act ("FIFRA").

1 As such, EPA must ensure that the pesticide uses it authorizes will not have unreasonable adverse
2 effects on the environment, including on endangered and threatened species and their habitats. 7 U.S.C.
3 §§ 136-136y. EPA also has duties to regulate and restrict pesticide uses under the Federal Food, Drug,
4 and Cosmetic Act, as amended by the Food Quality Protection Act, 21 U.S.C. §§ 307-397. EPA is
5 further charged with complying with the ESA with respect to its programs, authorities, and actions. 16
6 U.S.C. § 1536. Here, Plaintiffs bring claims only under the ESA.

7 15. Defendant LISA JACKSON is the Administrator of EPA. She is sued in her official
8 capacity as EPA Administrator.

9 **LEGAL BACKGROUND**

10 **I. EPA's Duties Under The Endangered Species Act**

11 16. Congress enacted the ESA, in part, to provide a “means whereby the ecosystems upon
12 which endangered species and threatened species depend may be conserved . . . [and] a program for the
13 conservation of such endangered species and threatened species” 16 U.S.C. § 1531(b).

14 17. The ESA vests primary responsibility for administering and enforcing the statute with the
15 Secretaries of Commerce and Interior. The Secretaries of Commerce and Interior have delegated this
16 responsibility to the NMFS and the FWS respectively.

17 18. When a species has been listed as threatened or endangered under the ESA, all federal
18 agencies – including EPA – must ensure that their programs and activities are in compliance with the
19 ESA.

20 19. To this end, Section 7(a)(2) of the ESA requires that “each federal agency shall, in
21 consultation with and with the assistance of the [Service], insure that any action authorized, funded, or
22 carried out by such agency [hereinafter “agency action”] is not likely to jeopardize the continued
23 existence of any endangered species or threatened species or result in the destruction or adverse
24 modification of habitat of such species which is determined by the [Service] . . . to be critical.” 16
25 U.S.C. § 1536(a)(2).

26 20. The ESA establishes an interagency consultation process to assist federal agencies in
27 complying with their Section 7(a)(2) duty to guard against jeopardy to listed species or destruction or
28 adverse modification of critical habitat. Under Section 7(a)(2), federal agencies must consult with the

1 Service to determine whether their actions will jeopardize listed species' survival or adversely modify
2 designated critical habitat, and if so, to identify ways to modify the action to avoid that result. 50 C.F.R.
3 § 402.14 (2010).

4 21. An agency must initiate consultation under Section 7 whenever its action "may affect" a
5 listed species or critical habitat. 50 C.F.R. § 402.14(a). Conversely, an agency is relieved of the
6 obligation to consult on its actions only where the action will have "no effect" on listed species or
7 designated critical habitat. Effects determinations are based on the direct, indirect, and cumulative
8 effects of the action when added to the environmental baseline and other interrelated and interdependent
9 actions. 50 C.F.R. § 402.02 (definition of "effects of the action").

10 22. An agency is required to review its actions "at the earliest possible time" to determine
11 whether the action may affected listed species or critical habitat. 50 C.F.R. § 402.14(a).

12 23. The scope of agency actions subject to consultation are broadly defined to encompass
13 "all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal
14 agencies." 50 C.F.R. § 402.02 (definition of "action").

15 24. Agencies must reinitiate consultation on agency actions over which the federal agency
16 retains, or is authorized to exercise, discretionary involvement or control if new information reveals
17 effects of the action that may affect listed species or critical habitat in a manner or to an extent not
18 previously considered; if the identified action is subsequently modified in a manner that causes an effect
19 to the listed species or critical habitat that was not considered in the biological opinion; or if a new
20 species is listed . . . that may be affected by the identified action." 50 C.F.R. § 402.16 (reinitiation of
21 consultation).

22 25. Section 7(d) of the ESA, 16 U.S.C. § 1536(d), provides that once a federal agency
23 initiates consultation on an action under the ESA, the agency "shall not make any irreversible or
24 irretrievable commitment of resources with respect to the agency action which has the effect of
25 foreclosing the formulation or implementation of any reasonable and prudent alternative measures
26 which would not violate subsection (a)(2) of this section." The purpose of Section 7(d) is to maintain
27 the environmental status quo pending the completion of consultation. Section 7(d) prohibitions remain
28 in effect throughout the consultation period and until the federal agency has satisfied its obligations

1 under Section 7(a)(2) that the action will not result in jeopardy to the species or adverse modification of
2 its critical habitat.

3 26. To initiate consultation, the action agency (here, EPA) must assess the impacts of the
4 action on listed species and their habitat and provide all relevant information about such impacts to the
5 Service. 50 C.F.R. § 402.14(c). If the action agency determines that an action “may affect,” but is “not
6 likely to adversely affect” the listed species or its critical habitat and the Service concurs in writing with
7 that determination, the agency does not have to undergo formal consultation. 50 C.F.R. § 402.13.

8 27. If the Service does not concur, or if the action agency has determined that the action is
9 “likely to adversely affect” the listed species, the agencies must conduct a formal consultation. *Id.* at §§
10 402.02, 402.14(a).

11 28. The end product of formal consultation is a biological opinion in which the Service
12 determines whether agency action will jeopardize the survival or recovery of listed species or will
13 destroy or adversely modify the species’ critical habitat. 16 U.S.C. § 1536(b). To make this
14 determination, the Service must review all relevant information and provide a detailed evaluation of the
15 action’s effects, including the cumulative effects of federal and nonfederal activities in the area, on the
16 listed species. 16 U.S.C. § 1536(b)(3)(A); 50 C.F.R. § 402.14(g)-(h). The Service has a statutory duty
17 to use the best available scientific information in an ESA consultation. 16 U.S.C. § 1536(a)(2); 50
18 C.F.R. § 402.14(g)(8). If the Service determines that the action is likely to jeopardize the species, the
19 biological opinion must specify “reasonable and prudent alternatives” that will avoid jeopardy. 16
20 U.S.C. § 1536(b); 50 C.F.R. § 402.14(h)(3). The Service must also formulate discretionary
21 conservation recommendations to reduce or minimize the action’s impacts on listed species or critical
22 habitat. 50 C.F.R. § 402.14(g)(6).

23 29. “[R]easonable and prudent alternatives” are alternative actions identified during formal
24 consultation that (1) can be implemented in a manner consistent with the intended purpose of the action,
25 (2) can be implemented consistent with the scope of the action agency’s legal authority, (3) are
26 economically and technologically feasible, and (4) would avoid the likelihood of jeopardizing the
27 continued existence of listed species and/or avert the destruction or adverse modification of critical
28 habitat.

1 30. Not only does a Section 7(a)(2) consultation assist the action agency in discharging its
2 duty to avoid jeopardy, but the biological opinion also affects the agency's obligation to avoid the
3 "take" of listed species. Under ESA Section 9, 16 U.S.C. § 1538(a)(1)(B), it is illegal for any person –
4 whether a private or governmental entity – to "take" any endangered species of fish or wildlife listed
5 under the ESA. "Take" is defined to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture,
6 or collect, or attempt to engage in such conduct. *Id.* at § 1532(19). The Service has defined "harm" to
7 include "significant habitat modification or degradation which actually kills or injures fish or wildlife
8 by significantly impairing essential behavioral patterns, including breeding, spawning, rearing,
9 migrating, feeding or sheltering." 50 C.F.R. § 222.102.

10 31. As part of a consultation, the Service determines whether to authorize the take of listed
11 species through the issuance of an incidental take statement. An incidental take statement may be
12 issued only if the action can proceed without causing jeopardy. 16 U.S.C. § 1536(b)(4). An incidental
13 take statement must: (1) specify the impact of the incidental take on the listed species; (2) specify
14 "reasonable and prudent measures" the agency considers necessary to minimize that impact; and (3) set
15 forth mandatory terms and conditions. *Id.*

16 32. Reasonable and prudent measures, along with terms and conditions, are nondiscretionary
17 measures included in an incidental take statement that the Service considers necessary to minimize and
18 reduce impact to listed species and avoid jeopardy.

19 33. An incidental take statement insulates the federal agency from liability for a take of an
20 endangered or threatened species, provided the agency complies with the statement's terms and
21 conditions. This insulation extends further to any entity receiving a federal permit, license,
22 authorization, or funding subject to, and in compliance with, the statement. 16 U.S.C. § 1536(o)(2).

23 **II. EPA's Oversight Of Pesticides Under The Federal Insecticide, Fungicide, And Rodenticide** 24 **Act**

25 34. The Environmental Protection Agency is responsible for the oversight of pesticide sales
26 and use in the United States. Specifically, the Federal Insecticide, Fungicide, and Rodenticide Act
27 ("FIFRA") charges EPA with registration, review, and ongoing oversight of chemicals for use as
28 insecticides, herbicides, fungicides, rodenticides, fumigants, and other pesticides (collectively

1 “pesticides”) in the United States. 7 U.S.C. §§ 136-136y. Under FIFRA, a pesticide generally may not
2 be sold or used in the United States unless it has an EPA registration for that particular use. 7 U.S.C. §
3 136a(a).

4 35. EPA may register a pesticide if it makes the following determinations: (1) the labeling
5 complies with FIFRA’s requirements; (2) the composition claims are warranted; (3) the pesticide will
6 perform its intended function; and (4) the pesticide will not cause unreasonable adverse effects on the
7 environment. 7 U.S.C. § 136a(c)(5).

8 36. The culmination of the registration process is EPA’s approval of a label for the particular
9 pesticide. FIFRA makes it unlawful to use a pesticide in a manner inconsistent with the label, 7 U.S.C.
10 § 136j(2)(G), or to make any claims that differ substantially from the label. 7 U.S.C. § 136j(1)(B).

11 37. EPA must classify pesticides as general or restricted use pesticides, depending on the risk
12 posed to the environment. Where necessary to guard against unreasonable adverse environmental
13 effects, EPA must classify a pesticide as restricted use. 7 U.S.C. § 136a(d)(1)(C). Restricted use
14 pesticides are subject to additional regulatory restrictions, particularly concerning application of the
15 pesticide. *Id.*

16 38. After approving a pesticide registration, EPA retains discretionary involvement and
17 control over that registration. EPA must periodically review pesticide registrations with a goal of
18 reviewing each pesticide registration every 15 years. 7 U.S.C. § 136a(g)(1). EPA has the authority to
19 compel registrants to submit data necessary for a “reregistration” review. *Id.* at 136a(g)(2). Registrants
20 are required to submit to EPA any information about registered pesticides’ unreasonable adverse effects
21 on the environment. *Id.* at § 136a(d)(2). EPA considers such information in reviewing and, where
22 necessary, modifying the pesticide registrations.

23 39. The EPA Administrator has the authority to cancel pesticide registrations whenever “a
24 pesticide or its labeling or other material required to be submitted does not comply with the provisions
25 of [FIFRA] or, when used in accordance with widespread and commonly recognized practice, generally
26 causes unreasonable adverse effects on the environment.” 7 U.S.C. § 136d(b). The Administrator may
27 immediately suspend a pesticide registration to prevent an imminent hazard. *Id.* § 136d(c). An
28

1 announcement by the Administrator of an intent to cancel a pesticide use often results in the registrant's
2 voluntary cancellation of, or agreement to further constraints upon, that use.

3 40. In 1988, amendments to FIFRA established a comprehensive reregistration scheme for
4 pesticides. 7 U.S.C. § 136a-1. The 1988 amendments require reregistration of all pesticide active
5 ingredients initially registered before November 1, 1984.

6 41. EPA's reregistration decisions require EPA to determine whether the pesticide causes
7 unreasonable adverse effects to people or the environment when used according to product labeling. 7
8 U.S.C. § 136a-1(g)(2)(C). The results of EPA's review are presented in a Reregistration Eligibility
9 Decision ("RED") document.

10 42. The RED contains a human health assessment and an ecological risk assessment. The
11 ecological risk assessment evaluates the likelihood that exposure to that pesticide may cause harmful
12 ecological effects. The effects can be direct (e.g. fish suffer the toxic effects from a pesticide entering
13 waterways), or indirect (e.g. birds become sick from ingesting contaminated fish). The studies
14 conducted in the ecological risk assessment include: defining the chemical properties of the pesticide;
15 determining how the pesticide behaves in the environment; and assessing its impact on plants and
16 animals not targeted by the pesticide (non-target organisms). To determine how the pesticide behaves
17 in the environment, EPA measures the interaction of the pesticide with soils, air, sunlight, surface water,
18 and ground water. It also considers the "environmental fate" of the pesticide: how fast and by what
19 means does the pesticide degrade; what are the breakdown chemicals; how much of the pesticide or its
20 breakdown chemicals will travel from the application site; and where will the pesticide or its breakdown
21 chemicals accumulate in the environment. Environmental fate analyses help to develop estimates of
22 pesticide concentrations in the environment. EPA compares possible exposures to a pesticide (based on
23 the environmental fate analyses) with resulting harmful effects on plants and animals.

24 43. The ecological risk assessment does not consider the cumulative or synergistic effects
25 posed by multiple pesticides on wildlife or the environment, nor does it address delayed effects of
26 pesticides, referred to as "lag effects."

27 44. The types of measures included in REDs to reduce risks from pesticides include:
28 voluntary cancellation of pesticide products or deletion of uses; declaring certain uses ineligible or not

1 yet eligible (and then proceeding with follow-up action to cancel the uses or require additional
2 supporting data); restricting use of products to certified applicators; limiting the amount or frequency of
3 use; improving use directions and precautions; requiring more protective clothing and equipment for
4 users; requiring special packaging or engineering controls; requiring no-treatment buffer zones;
5 employing ground water, surface water, or other environmental and ecological safeguards; and other
6 measures.

7 45. After EPA has issued a RED and declared a pesticide eligible for reregistration, individual
8 end-use products that contain pesticide active ingredients included in the case still must be reregistered.
9 This concluding part of the reregistration process is referred to as “product reregistration.” In issuing a
10 completed RED document, EPA calls in any product-specific data and revised labeling needed to make
11 final reregistration decisions for each of the individual pesticide products covered by the RED.

12 46. In 1996, Congress further amended FIFRA with the Federal Food, Drug, and Cosmetic
13 Act (“FFDCA”), 21 U.S.C. § 346a, as amended by the Food Quality Protection Act (“FQPA”), Pub. L.
14 104-170, which established new safety standards for pesticide residue in food. Under FQPA, EPA must
15 further determine with “reasonable certainty that no harm” will come to infants, children or other
16 sensitive individuals exposed to pesticides from food, water, and home and garden use. FQPA also
17 requires EPA to consider the cumulative effects of pesticides with common mechanisms of toxicity
18 when evaluating the safety of individual pesticides. EPA is satisfying FQPA’s requirements by
19 reassessing all existing “tolerances,” which are maximum limits for pesticide residues in foods. EPA is
20 using the reregistration program to accomplish the tolerance reassessments.

21 **III. EPA’s Review Of Pesticide Impacts On Listed Species**

22 47. In 1988, EPA established the “Endangered Species Protection Program” or “ESPP” to try
23 to address its pesticide program’s compliance with the ESA.

24 48. EPA uses Endangered Species Protection Bulletins (“Bulletins”) to reflect geographically
25 specific pesticide use limitations. In November of 2005, EPA published a final notice for its Field
26 Implementation of its Endangered Species Protection Program (“ESPP”). Prior to issuance of the final
27 ESPP, these Bulletins were voluntary. While the Bulletins are now enforceable, EPA has issued very
28 few Bulletins.

1 49. Despite the existence of EPA's ESPP program for over 20 years, the vast majority of
2 pesticides have undergone no ESA analysis of impacts to listed species.

3 50. In fact, on information and belief, since 1993, there have been only a few completed
4 consultations with the Service regarding pesticide impacts to listed species, other than those imposed by
5 court orders, as discussed below.

6 **IV. Previous Litigation Addressing EPA's Failure To Consult With The Service Regarding**
7 **Pesticide Impacts To Endangered And Threatened Species**

8 51. On January 30, 2001, a coalition of environmental groups filed a lawsuit against EPA for
9 violating the ESA when it failed to consult with the NMFS on pesticide impacts to endangered or
10 threatened salmon and steelhead in the waters of the Pacific Northwest. EPA admittedly did not do any
11 such consultation, but it argued that because it complied with FIFRA in registering the pesticides, it was
12 not bound by the ESA. The Ninth Circuit rejected EPA's contention and held that the agency was
13 bound by the ESA: "EPA retains ongoing discretion to register pesticides, alter pesticide registrations,
14 and cancel pesticide registrations. Because EPA has continuing authority over pesticide regulation, it
15 has a continuing obligation to follow the requirements of the ESA." *Washington Toxics Coalition v.*
16 *EPA*, 413 F.3d 1024, 1033 (9th Cir. 2005). The Ninth Circuit affirmed the district court's grant of
17 injunctive relief, which placed restrictions on the use of certain pesticides in or near the habitat of listed
18 salmon and steelhead. *Id.* at 1035.

19 52. On April 2, 2002, the Center for Biological Diversity filed a lawsuit against EPA for
20 failing to undergo consultation with the FWS regarding pesticide impacts on the California red-legged
21 frog, in violation of Section 7(a)(2) of the ESA. On September 19, 2005, the Court granted the Center's
22 motion for summary judgment. *Center for Biological Diversity v. Leavitt*, 2005 U.S. Dist. LEXIS
23 40806, * 12 (N.D. Cal. Sept. 19, 2005). Pursuant to the Court's order, the parties on October 20, 2006,
24 stipulated to a schedule by which EPA would determine if its actions could affect the species and also
25 agreed to interim injunctive relief that provided for restrictions on pesticide use in and near frog habitat.

26 53. On May 30, 2007, the Center for Biological Diversity filed a lawsuit against EPA for
27 failing to undergo consultation with FWS regarding pesticide impacts on eleven San Francisco Bay Area
28 species, in violation of Section 7(a)(2) of the ESA. On May 17, 2010, the Court entered an Order

1 Approving the Stipulated Injunction. *Center for Biological Diversity v. Environmental Protection*
2 *Agency*, 3:07-cv-02794-JCS (Docket No. 121). Through this stipulation, EPA agreed to a schedule of
3 compliance for completing consultation, and to an injunction restricting pesticide use in and near the
4 species' habitats.

5 **FACTUAL BACKGROUND**

6 **I. Pesticide Use In The U.S.**

7 54. Widespread use of synthetic pesticides began after World War II when federal and local
8 governments sponsored large-scale spraying programs using organochlorines such as DDT. Although
9 many of the organochlorines have been phased out, they have been replaced with less persistent yet still
10 potentially harmful chemicals such as organophosphates, carbamates, and triazines.

11 55. Over one billion pounds of pesticides are used each year in this country to control weeds,
12 insects and other living organisms. EPA has registered more than 18,000 pesticides.

13 56. Agriculture accounts for 70 to 80 percent of total pesticide use with few measures in
14 place to protect the environment. Home and commercial uses also contribute significant amounts of
15 pesticides to our environment.

16 **II. Pesticide Contamination Of The Environment**

17 **Runoff Leads To Contaminated Waterways**

18 57. Agricultural and urban runoff transports pesticides from their application sites to other
19 parts of the environment. Movement of pesticides via runoff can occur when pesticides are dissolved in
20 the water or bound to eroding soil particles.

21 58. Over the last decade, the United States Geological Survey ("USGS") has released several
22 reports on its nationwide water quality surveys, documenting the prevalence of pesticides in our
23 nation's waterways, particularly in streams and groundwater in basins with significant agricultural or
24 urban development.

25 59. This polluted runoff can pose acute and chronic problems to wildlife and plants. USGS
26 noted a direct correlation between the amounts and types of pesticides used and their frequency in
27 nearby surface waters. USGS found pesticides in waters at concentrations exceeding harmful levels and
28 mixtures of multiple pesticides were commonly found in stream samples.

Pesticide Drift Harms Wildlife Far From Target Site

60. Runoff is not the only mechanism by which pesticides travel inadvertently. Pesticide drift is any airborne movement of pesticides away from the target site. Fine droplets generated by spray nozzles can drift long distances before settling. EPA receives thousands of reported complaints of off-target spray drift each year. EPA acknowledges that some degree of spray drift will occur from nearly all pesticide applications.

61. In addition, applications of gaseous fumigant pesticides always involve escape of the gases from the intended application site, generally through the normal (and presently legal) application process, but also through leaking equipment, containers, or tarps.

62. Pesticide drift does not end when applications are complete. Post-application drift also may occur over many days and even weeks after a pesticide application. Post-application drift takes two forms. Volatilization drift occurs because some pesticides readily volatilize from the leaf and soil surfaces on which they were initially deposited. These pesticides might be liquids or oils when applied, but evaporate in the heat of the day, drift for a distance, and re-condense when the temperature drops or when they contact a cool surface. This process is repeated many times as the pesticide is carried by prevailing winds. Drift of pesticide-coated dust particles can also occur. High winds in agricultural areas create clouds of dust from pesticide-treated fields. This dust is eventually deposited, often a great distance from its application point. Both volatile and non-volatile pesticides may cling to dust particles and drift in this manner.

63. The amount of drift that occurs via pesticide use has been characterized as “considerable” by the National Research Council and is thought to vary from 5 percent (under optimal low wind conditions) to 60 percent (under more typical conditions). Pesticides can drift for many miles.

64. Impacts to non-target wildlife from pesticide drift have been well documented. For example, studies have implicated pesticide drift from the Central Valley of California in disproportional declines of several native frog species in the Sierra Nevada mountain range. Even tadpoles collected from high in the Sierra Nevada in areas with no direct pesticide use contain pesticide residues in their systems.

1 **III. Pesticide Classes**

2 **Insecticides**

3 65. Insecticides are used in agricultural, commercial, and residential settings to control
4 arthropod and arachnid insects. Aquatic arthropods such as crustaceans and aquatic insects are also
5 sensitive to insecticides. Because many insecticides work by mechanisms of action that also apply in
6 mammalian, avian, fish, amphibian and reptile species, they are directly toxic to many animal taxa
7 groups.

8 66. Insecticides can also have indirect effects on endangered species by virtue of their
9 toxicity to the food sources; for example, some fish species are not particularly sensitive to some types
10 of insecticides, yet the aquatic insects that they rely on for a food supply can be eliminated by a toxic
11 pulse of pesticide from field runoff.

12 67. The different classes of insecticides have differing relative toxicity to different taxa
13 groups. The neurotoxic organochlorine, organophosphorus, and carbamate insecticides can be acutely
14 toxic to birds, mammals, and fish.

15 68. The pyrethroid insecticides are generally less acutely toxic to mammals and birds, but
16 can be highly acutely toxic to aquatic organisms. Pyrethroid insecticides may also cause chronic effects
17 on reproduction through disruption of the endocrine system. Persistent insecticides such as some of the
18 pyrethroids have been shown to affect benthic species in creeks receiving runoff from agricultural and
19 residential areas where the pesticides are used.

20 69. Broad-spectrum pesticides used to destroy pest insects can disrupt the natural balance
21 between pest and predator insects and indiscriminately kill beneficial insects needed for pollination and
22 other ecosystem services as well.

23 **Herbicides**

24 70. Herbicides are used in agricultural, commercial, and residential settings to control
25 terrestrial and aquatic weeds.

26 71. Many herbicides are water soluble with low affinity for soils and thus have potential to
27 run off into aquatic ecosystems where they may pose a risk to aquatic species. Both runoff and spray
28 drift of herbicides into aquatic and terrestrial habitats can destroy plant cover used for habitat and food

1 for endangered animals, leading to indirect effects on endangered species. Although generally less
2 acutely toxic than insecticides, many herbicides may cause chronic effects on reproduction through
3 disruption of the endocrine system or by other mechanisms.

4 72. Several classes of herbicides are particularly problematic for endangered species. Some
5 chloroacetanilide herbicides are toxic to certain species of mammals, birds, crustaceans and fish, as well
6 as non-target plants. Triazine herbicides have been associated with endocrine disruption, with effects
7 on the reproductive and immune systems capable of compromising populations of endangered species.
8 Sulfonylurea and pyridinecarboxylic acid herbicides are exceptionally long-lived and can have long-
9 lasting impacts on plants and the imperiled species that depend upon them for survival.

10 **Rodenticides**

11 73. Rodenticides are used to control mice, rats, gophers, other rodents, and rabbits in
12 agricultural, residential, and commercial settings.

13 74. There is potential for harm not only to endangered rodents, but also to the many predator
14 species that depend on rodents as food. Raptors, scavengers (such as the California condor), and
15 mammalian predators (such as wolves and foxes) are all vulnerable from ingesting poisoned rodents.

16 75. Rodenticides fall into several categories, such as first-generation anticoagulants (warfarin,
17 chlorophacinone, and diphacinone) and second-generation anticoagulants (brodifacoum, difethialone,
18 bromadiolone and difenacoum). For the second-generation anticoagulants, the time between ingestion
19 and death can be as long as five days. Additionally, second-generation anticoagulants can persist in
20 body tissues for nearly one year and can cause secondary poisoning to predators over extended periods
21 of time.

22 **Fungicides**

23 76. Fungicides are used against molds, mildews, soil pathogens, and in wood preservation.

24 77. As a group, fungicides are heterogeneous and diverse and may affect a wide variety of
25 endangered species through various mechanisms. Acute effects to aquatic species are particularly
26 notable for fungicides. Endocrine disruption is also a potential effect of exposure to many fungicides,
27 with effects on reproduction and the immune system.

Fumigants

78. Fumigant pesticides (methyl bromide, methyl iodide, metam and dazomet salts, chloropicrin and 1,3-dichloropropene) are used in pre-plant soil treatments to kill nematodes, fungal pathogens, and weed seeds.

79. Fumigants are used at application rates between 50 and 400 pounds per acre and are all highly volatile, vaporizing to form gases that drift away from the application site and into neighboring areas.

80. EPA has not required sufficient data for a comprehensive ecological analysis, and it has not prioritized these chemicals for ecological risk assessment, assuming that effects are minimal, although there is little data to support that conclusion. In fact, many of these chemicals are neurotoxic and/or highly irritating and used at such high application rates that animals adjacent to fumigation sites find it impossible to avoid inhalation exposure at levels that could be fatal or severely damaging to the individual. Spills of liquid fumigants into waterways can be similarly devastating to aquatic life.

IV. Harmful Biological Effects Of Pesticides

81. Pesticides are well known to have adverse effects on wildlife. These impacts have been in the public consciousness since the 1960s when Rachel Carson published *Silent Spring*, which examined devastating impacts of pesticides on the environment, particularly birds. In 2004, the Center published *Silent Spring Revisited: Pesticide Use and Endangered Species*, detailing the Environmental Protection Agency's dismal record in protecting endangered species from pesticides.

82. Death is the most extreme and obvious effect of exposure to pesticides, but it is not the only significant biological impact. Sublethal effects occur at far lower concentrations than those that cause death. Sublethal effects include impaired growth and development, malformations, reduced reproductive success, immune suppression, and more. For example, a 2009 study found that exposure to pesticides can slow the time to metamorphosis for frog and toad species. Such delay causes increased vulnerability to predators and may be a factor contributing to widespread amphibian decline.

83. Aquatic species are particularly vulnerable to the harmful impacts of pesticides because pesticides are pervasive in U.S. waterways. USGS found that "[a]lmost every sample of water and fish from streams and major rivers in all land use settings contained at least one of the pesticides that we

1 measured. This means that, throughout the nation, almost every time and place that you observe a
2 stream or river in a populated area you are looking at water that contains pesticides, inhabited by fish
3 that contain pesticides.”

4 84. Many of the pesticides detected in U.S. waterways have been discontinued for many
5 years, and their continued presence raises serious concerns about the long-term chronic impacts of
6 pesticides on aquatic species. Moreover, more recent and currently used pesticides (such as
7 chlorpyrifos, benfluralin, dicofol, bensulide, PCNB, endosulfan, pentachlorophenol, esfenvalerate,
8 ethalfluralin, oxadiazon, pendimethalin, triallate, trifluralin, permethrin, phorate, and propargite) are all
9 predicted to have potential to accumulate in aquatic biota.

10 85. Amphibians are highly susceptible to pesticides because of their permeable skins. For
11 example, salamanders can readily absorb the chemical chlorpyrifos through their permeable skins,
12 especially when migrating through recently treated fields. Numerous studies have documented
13 significant impacts to amphibians from pesticide exposure.

14 86. Wildlife can be indirectly impacted when pesticides harm food sources. For example, a
15 2005 study examined the impacts on salamanders from carbaryl, which is a commonly used insecticide
16 for home gardens, commercial agriculture, and forestry protection. The study found that zooplankton –
17 a primary food source for many salamanders during the aquatic life phase – was nearly eliminated by
18 concentrations of carbaryl commonly found in the environment. Without this food source, the study
19 showed that mortality in salamander larvae increased, resulting in fewer salamanders ultimately
20 reproducing and contributing to population declines.

21 87. Pesticides may also have indirect effects on insectivorous birds. In a 2010 study
22 published in the Journal of Applied Ecology, scientists found that populations of insectivorous birds
23 declined after application of insecticides suppressed their prey base of mosquitoes. Other studies have
24 shown that herbivorous insects can contain pesticide residues from eating plants sprayed with
25 herbicides. Insectivorous birds that ingest these insects may suffer the harmful effects of the pesticides.

26 88. Similarly, rodenticides enter the food chain when non-target birds and mammals feed on
27 targeted rodents. In a May 2008 risk assessment for rodenticides, EPA found that widespread exposure
28 of non-target animals is occurring wherever rodenticides are being used. For example, EPA found in

1 California that 71 to 84% of the 106 bobcats, mountain lions, and San Joaquin kit foxes analyzed had
2 been exposed. EPA suspects that the results from California are representative of non-target wildlife
3 exposures nationwide. In addition, FWS has found that rodenticides typically used on ground squirrels
4 are likely to have a disproportionately adverse effect on salamanders, which can inhabit rodent burrows,
5 are smaller than the target species, and have permeable skins.

6 89. Synthetic pyrethroids are suspected to have reproductive effects on birds. Sub-lethal
7 exposure to pesticides can chronically affect avian behavior, reproduction, and nervous system function.
8 Birds exposed to pesticides can become more susceptible to predation, experience weight loss, and
9 have decreased resistance to disease. Pesticide exposure can also reduce interest in mating and
10 defending territory and cause birds to abandon their nestlings.

11 90. Even low doses of pesticides in wildlife can have drastic consequences. This is especially
12 true for pesticides that act as “endocrine disruptors.” Endocrine disruptors are chemicals that mimic an
13 organism’s hormones, disrupting natural processes by sending false messages, blocking real messages,
14 preventing synthesis of the body’s own hormones, and accelerating the breakdown and excretion of
15 hormones. Endocrine disruption affects how an organism develops and functions. Reproductive
16 disorders, immune system dysfunction, thyroid disorders, types of cancer, birth defects and neurological
17 effects have all been linked to endocrine disruption. In particular, carbamate, organophosphate, and
18 triazine pesticides have all been shown to disrupt hormone systems. Over 60% of the poundage of
19 agricultural herbicides applied in the United States has the potential to disrupt endocrine and/or
20 reproductive systems wildlife (and humans).

21 91. Atrazine provides a stark example of the problem posed by endocrine disruptors.
22 Atrazine – which is now banned in the European Union – is the most commonly detected pesticide in
23 U.S. waters with about 75% of streamwater and 40% of groundwater containing atrazine. A 2007
24 USGS report identified levels of concentration of atrazine in watersheds: of the watersheds sampled, 25
25 watersheds had average concentrations above 1.0 ppb, nine had samples of 50 ppb or above, and four
26 exceeded 100 ppb. At just 0.1 ppb – far below the level established by EPA as safe for aquatic
27 organisms – atrazine can alter the development of sex characteristics in male frogs. As a result, studies
28

1 have concluded that due to the pervasive nature of atrazine at levels that can disrupt sexual development,
2 aquatic environments across the country are at risk.

3 92. These are just a few of the examples of the harm being inflicted by widespread pesticide
4 use. These harmful impacts have been known for years. Yet EPA continues to ignore this information
5 at the expense of numerous endangered and threatened species and their habitats. Action by EPA to
6 ensure that registered pesticides are not jeopardizing the survival and recovery of endangered and
7 threatened species is long overdue.

8 **V. Endangered And Threatened Species May Be Adversely Affected From Ongoing Exposure**
9 **To Pesticides**

10 93. The pesticides identified in Exhibit A, which is attached to this Complaint and hereby
11 fully incorporated within it, may affect the following endangered or threatened species or their critical
12 habitats:

13 • **Mammals**: Amargosa vole, black-footed ferret, Buena Vista Lake ornate shrew,
14 Carolina northern flying squirrel, Columbian white-tailed deer (Columbia River DPS), Delmarva
15 Peninsula fox squirrel, Florida salt marsh vole, Florida panther, Fresno kangaroo rat, giant kangaroo rat,
16 gray bat, gray wolf, Gulf Coast jaguarundi, Indiana bat, Key Largo cotton mouse, Key Largo woodrat,
17 killer whale (Southern Resident DPS), Louisiana black bear, Lower Keys rabbit, Morro Bay kangaroo
18 rat, ocelot, Ozark big-eared bat, Preble's meadow jumping mouse, riparian brush rabbit, riparian
19 woodrat, San Joaquin kit fox, Stephen's kangaroo rat, Tipton kangaroo rat, Utah prairie dog, and West
20 Indian manatee;

21 • **Birds**: Attwater's greater prairie chicken, Audubon's crested caracara (Florida DPS),
22 black-capped vireo, California condor, California least tern, Coastal California gnatcatcher, Florida
23 grasshopper sparrow, Florida scrub jay, light-footed clapper rail, Mississippi sandhill crane, northern
24 aplomado falcon, northern spotted owl, piping plover, red-cockaded woodpecker, roseate tern
25 (Northeast and Caribbean DPSs), San Clemente loggerhead shrike, southwestern willow flycatcher,
26 western snowy plover (Pacific DPS), and wood stork (U.S. breeding DPS);

27 • **Fish**: Alabama cavefish, Alabama sturgeon, amber darter, Atlantic salmon (Gulf of
28 Maine DPS), bayou darter, blue shiner, bonytail chub, boulder darter, bull trout (U.S. DPS), Cape Fear

1 shiner, Cherokee darter, Colorado pikeminnow, desert pupfish, Devils River minnow, Etowah darter,
 2 fountain darter, goldline darter, Gulf sturgeon, humpback chub, leopard darter, Little Colorado
 3 spinedace, Lost River sucker, Niangua darter, North American green sturgeon (Southern DPS), Oregon
 4 chub, Ozark cavefish, Pecos bluntnose shiner, pygmy madtom, razorback sucker, Rio Grande silvery
 5 minnow, Santa Ana sucker, shortnose sturgeon, smalltooth sawfish (U.S. DPS), snail darter, Topeka
 6 shiner, Vermilion darter, Waccamaw silverside, and watercress darter;

7 • **Amphibians**: Arroyo toad, California tiger salamander (Central California DPS (except
 8 for Bay Area Counties) and Santa Barbara County DPS), Chiricahua leopard frog, frosted flatwoods
 9 salamander, guajon, Mississippi gopher frog, mountain yellow-legged frog (Southern California DPS),
 10 Puerto Rican crested toad, Red Hills salamander, reticulated flatwoods salamander, San Marcos
 11 salamander, Santa Cruz long-toed salamander, Shenandoah salamander, Texas blind salamander, and
 12 Wyoming toad;

13 • **Mollusks**: Alabama lampmussel, Alabama moccasinshell, Appalachian elktoe,
 14 Appalachian monkeyface, Arkansas fatmucket, armored marstonia, birdwing pearlymussel, Bliss
 15 Rapids snail, Carolina heelsplitter, Chipola slabshell, clubshell, Coosa moccasinshell, Cumberland bean,
 16 Cumberlandian combshell, cylindrical lioplax, dark pigtoe, dromedary pearlymussel, dwarf
 17 wedgemussel, fat threeridge, finelined pocketbook, finerayed pigtoe, flat pebblesnail, Gulf
 18 moccasinshell, Heavy pigtoe (Judge Tait's mussel), Higgins eye pearlymussel, Iowa Pleistocene snail,
 19 James spinymussel, Koster's tryonia snail (Koster's springsnail), lacy elimia, littlewing pearlymussel,
 20 Louisiana pearlshell, Morro shoulderband snail, northern riffleshell, Ochlockonee moccasinshell,
 21 orangenacre mucket, Ouachita rock pocketbook, oval pigtoe, ovate clubshell, oyster mussel, painted
 22 rocksnail, Pecos assiminea, pink mucket, plicate rocksnail, purple bankclimber, purple bean, Roswell
 23 springsnail, rough pigtoe, rough rabbitsfoot, round rocksnail, scaleshell mussel, shiny pigtoe, shinyrayed
 24 pocketbook, slender campeloma, Snake River physa, southern acornshell, southern clubshell, southern
 25 combshell (Penitent mussel), southern pigtoe, speckled pocketbook, stirrup shell, Stock Island tree snail,
 26 tan riffleshell, triangular kidneyshell, tulotoma, upland combshell, white wartyback, and winged
 27 mapleleaf;

1 • **Crustaceans**: Alabama cave shrimp, cave crayfish, conservancy fairy shrimp, Illinois
2 cave amphipod, Kauai cave amphipod, Nashville crayfish, Peck's cave amphipod, San Diego fairy
3 shrimp, Shasta crayfish, and Squirrel Chimney cave shrimp;

4 • **Insects**: American burying beetle, Behren's fritillary (Behren's silverspot), Callippe
5 silverspot, Delhi Sands flower-loving fly, Fender's blue, Hine's emerald dragonfly, Karner blue, Kauai
6 cave wolf spider, Kern primrose sphinx moth, Lange's metalmark, Mitchell's satyr butterfly, Myrtle's
7 silverspot, northeastern beach tiger beetle, Ohlone tiger beetle, Quino checkerspot butterfly, Robber
8 Baron cave meshweaver, Salt Creek tiger beetle, San Bruno elfin, Schaus swallowtail, spruce-fir moss
9 spider, and Zayante band-winged grasshopper;

10 • **Reptiles**: Alabama redbelly turtle, Atlantic salt marsh snake, bluetail mole skink, blunt-
11 nosed leopard lizard, bog turtle (Northern DPS), Coachella Valley fringe-toed lizard, desert tortoise
12 (Mojave DPS), Eastern indigo snake, giant garter snake, gopher tortoise (Western DPS), northern red-
13 bellied cooter (Plymouth red-bellied cooter), ringed map turtle, and sand skink.

14 94. Moreover, in addition to the pesticides listed in Exhibit A for the above species, any
15 pesticide that could be used as a substitute for a pesticide listed in Exhibit A, and which poses a risk of
16 harm to the species, may also affect the above species. For example, pyrethroid or neonicitinoid
17 insecticides are often used as substitutes for organophosphorus insecticides, although they may not have
18 been used historically in or near a particular species' habitat. Similarly, new pesticides may have come
19 on the market in the years since the historical use data were published. Species need protection from
20 newer pesticides and EPA must consult with the Service to ensure that their use will not harm
21 endangered or threatened species.

22 95. Each of the pesticides subject to this lawsuit falls within one of the following three
23 categories.

24 96. Category 1 includes pesticides for which EPA has indicated that Estimated
25 Environmental Concentrations are likely to exceed Levels of Concern for endangered or threatened
26 species or may cause indirect effects on endangered species by altering habitat or food sources.

27 97. Category 2 includes pesticides that are "highly acutely toxic" or "very highly acutely
28 toxic" to one or more taxa groups. These toxicity ratings are based on LD50 or LC50 data (lethal dose

1 to 50 percent of the test organisms or lethal concentration of 50 percent of the test organisms) in one or
2 more of three databases that EPA maintains: AQUIRE, Terretox, and EPA database of ecotoxicity
3 studies used in registration decisions.

4 98. Category 3 includes pesticides that are suspected endocrine disruptors based on published
5 information, as well as pesticides that do not fall into Category 1 or 2 but for which data exist in
6 regulatory reports from other agencies, peer-reviewed literature, or Materials Safety Data Sheets
7 indicating high toxicity to certain taxa groups.

8 99. The endangered or threatened species identified in Exhibit A, as well as their habitats, are
9 susceptible to harmful impacts from pesticides. Federal agency documents or peer-reviewed journal
10 articles document pesticide impacts on these species.

11 100. In addition, for many of the species at issue in this lawsuit, USGS has identified
12 pesticides known to be harmful to the taxonomic group to which the species belongs in a watershed
13 occupied by the species.

14 101. The pesticides listed for each endangered or threatened species in Exhibit A are those
15 known to be harmful to the taxonomic group of that species and can be used in the state where that
16 species lives.

17 102. This lawsuit does not cover combinations of pesticides and species for which effects
18 determinations and ESA Section 7 consultations are already in progress as a result of settlement of past
19 legal actions, unless such consultations are geographically restricted, in which case this lawsuit includes
20 those geographic areas not already covered by these consultations.

21 103. EPA has initiated consultation with the Service on only a small fraction of the registered
22 pesticides that can impact endangered and threatened species. And even for these pesticides, the
23 consultations do not consider all of the endangered and threatened species, or all of the geographic
24 regions, potentially impacted by these pesticides.

1 **VI. Examples of Documented Pesticide Impacts On Particular Endangered And Threatened**
2 **Species**

3 104. Potential impacts due to pesticide exposures for particular endangered and threatened
4 species are well documented. A few examples of the risks pesticides pose to listed species are provided
5 below.

6 105. Hoy and others (2002) discuss endocrine-disrupting pesticides as possible causes of
7 genital abnormalities in populations of male **Columbian white-tailed deer**.

8 106. EPA has found in its *Risk Assessment for Rodenticides* that: “[W]idespread exposures to
9 second-generation anticoagulants are occurring wherever those rodenticides are being used. Residue
10 analyses indicate that exposure is widespread in non-target populations. In New York, second-
11 generation anticoagulants were detected in 48% of 265 diurnal raptors and owls analyzed (15 species),
12 including 81% of 53 great horned owls, 58% of 78 red-tailed hawks, and 45% of 22 Eastern screech-
13 owls. In California, second-generation anticoagulants were detected in 71 to 84% of the 106 bobcats,
14 mountain lions, and **San Joaquin kit foxes** analyzed. Although comparable data from other states are
15 lacking, EPA suspects that the results from New York and California are representative of non-target
16 wildlife exposures nationwide.”

17 107. The listing designation for the **Buena Vista Lake shrew**, *Endangered Status for the*
18 *Buena Vista Lake Shrew*, 67 Fed. Reg. 10101 (March 6, 2002), states that due to the close proximity of
19 shrew habitat to an otherwise agriculturally dominated landscape, the shrew may be “directly exposed to
20 lethal and sublethal concentrations of pesticides from drift or direct spraying of crops, canals and ditch
21 banks, wetland or riparian edges, and roadsides where shrews might exist.” The listing designation also
22 notes that “[r]educed reproduction in Buena Vista Lake Shrews could be directly caused by pesticides
23 through grooming, and secondarily from feeding on contaminated insects.” The listing also specifically
24 acknowledges the endocrine-disrupting effects of carbamates and organophosphates, stating that
25 “laboratory experiments have shown that behavioral activities such as rearing, exploring for food, and
26 sniffing can be depressed for up to 6 hours in the common shrew from environmental and dietary
27 exposure to sublethal doses of a widely used insecticide, dimethoate.” Such depression in behavioral
28 activities could make the Buena Vista Lake shrew more vulnerable to predation and starvation.

1 108. The proximity of the **southwestern willow flycatcher** to agricultural areas indicates a
2 potential threat from pesticides. *Final Rule Determining Endangered Status for the Southwestern*
3 *Willow Flycatcher*, 60 Fed. Reg. 10694, 10713 (Feb. 27, 1995). FWS noted that pesticides may
4 potentially affect the flycatcher through direct toxicity or effects on their insect food base. *Id.*

5 109. In a proposed rulemaking to establish take prohibitions for **green sturgeon**, 74 Fed. Reg.
6 23821 (May 21, 2009), the FWS found that the “application of pesticides may adversely affect prey
7 resources and water quality within the bays and estuaries. For example, in Willapa Bay and Grays
8 Harbor, the use of carbaryl in association with aquaculture operations reduces the abundance and
9 availability of burrowing ghost shrimp, an important prey species for green sturgeon (Moser and
10 Lindley 2007; Dumbauld et al. 2008). In the San Francisco, San Pablo, and Suisun bays, several
11 pesticides have been detected at levels exceeding national benchmarks for the protection of aquatic life
12 (Domagalski et al. 2000). These pesticides pose a water quality issue and may affect the abundance and
13 health of prey items as well as the growth and reproductive health of Southern DPS green sturgeon
14 through bioaccumulation.” *Id.*

15 110. FWS has stated that the surviving population of the **Vermillion darter** is currently
16 threatened by pesticides that wash into streams from runoff. *Final Rule to List the Vermillion Darter as*
17 *Endangered*, 66 Fed. Reg. 59367 (Nov. 28, 2001). FWS cited to a study (Swann 2000) that attributed a
18 past fish kill to pesticide runoff from urban use. *Id.*

19 111. FWS has determined that pesticides may harm the **scaleshell mussel**. *Determination of*
20 *Endangered Status for the Scaleshell Mussel*, 66 Fed. Reg. 51322, 51334 (October 9, 2001). Surface
21 run-off of pesticides was noted as an apparent contributing factor in the degradation of the scaleshell
22 mussel’s habitat. *Id.* FWS acknowledged that pesticide registration is a federal activity that could
23 impact the scaleshell mussel.

24 112. The FWS has determined that use of insecticides threatens the **Callippe silverspot** and
25 **Behren’s silverspot butterflies**. *Determination of Endangered Status for the Callippe Silverspot*
26 *Butterfly and the Behren’s Silverspot Butterfly and Threatened Status for Alameda Whipsnake*, 62 Fed.
27 Reg. 64306, 64314 (Dec. 5, 1997). FWS noted that silverspot butterfly larvae are extremely sensitive to
28

1 pesticides and the accumulation of runoff in the soil after spraying has proven lethal to the larvae of
2 members of the genus to which these two species belong. *Id.*

3 113. In a five-year review for the **Alabama cave shrimp** conducted by the FWS, it was stated
4 that urbanization may have caused contamination of the aquifers containing this species. FWS states
5 that groundwater contamination may result from “sewage leakage, industrial contaminants, road and
6 highway runoff, toxic spills, pesticides, and siltation” and that this is likely the greatest threat to
7 populations of this shrimp.

8 114. For the **arroyo toad**, which is found in agricultural fields, FWS noted that such habitat is
9 probably a sink over the long term due to pesticide applications. *Designation of Critical Habitat for the*
10 *Arroyo Toad*, 66 Fed. Reg. 9414, 9415 (Feb. 7, 2001). FWS went on to state that the use of pesticides
11 and herbicides within or adjacent to arroyo toad habitat may cause adverse impacts.

12 115. FWS notes: “Pesticides (including herbicides) may pose a threat to amphibians, such as
13 the **frosted flatwoods salamander**, whose permeable eggs and skin readily absorb substances from the
14 surrounding aquatic or terrestrial environment (Duellman and Trueb 1986, pp. 199-200). Negative
15 effects that commonly used pesticides and herbicides may have on amphibians include delayed
16 metamorphosis, paralysis, reduced growth rate, and mortality (Bishop 1992, pp. 6769). Herbicides used
17 near frosted flatwoods salamander breeding ponds may alter the density and species composition of
18 vegetation surrounding a breeding site and reduce the number of potential sites for egg deposition,
19 larval development, or shelter for migrating salamanders. Aerial spraying of herbicides over outdoor
20 pond mesocosms (semifield approximations of ponds) has been shown to reduce zooplankton diversity,
21 a food source for larval frosted flatwoods salamanders, and cause very high (68 to 100 percent)
22 mortality in tadpoles and juvenile frogs (Relyea 2005, pp. 618-626). The potential for negative effects
23 from pesticide and herbicide use in areas adjacent to breeding ponds would be reduced by avoiding
24 aerial spraying (Tatum 2004, p. 1047).” *Endangered and Threatened Wildlife and Plants; Proposed*
25 *Endangered Status for Reticulated Flatwoods Salamander; Proposed Designation of Critical Habitat*
26 *for Frosted Flatwoods Salamander and Reticulated Flatwoods Salamander*, 73 Fed. Reg. 54125, 54131
27 (September 18, 2008).

1 116. The FWS has recognized that pesticides may affect the **Mississippi gopher frog**. FWS
2 cited numerous studies recognizing the multiple impacts pesticides have on frogs throughout their life
3 cycle. *Final Rule to List the Mississippi Gopher Frog Distinct Population Segment of the Dusky Gopher*
4 *Frog as Endangered*, 66 Fed. Reg. 62993 (December 4, 2001). FWS has also stated: “Some chemicals
5 used as herbicides and pesticides are known to be toxic to aquatic amphibians. Since there is only one
6 remaining pond for the Mississippi gopher frog population, any sedimentation or toxic run-off that
7 reaches the pond could destroy the pond and injure or kill tadpoles and adult frogs.”

8 **VII. Examples of Statements From EPA, Other Agencies, And Scientists That Particular**
9 **Pesticides Cause Impacts On Listed Species**

10 117. For many of the pesticides listed in Exhibit A, EPA has indicated in its own ecological
11 risk assessments that the “Expected Environmental Concentrations” are likely to exceed the “Levels of
12 Concern” (“LOCs”) for endangered species or threatened species and may cause indirect effects by
13 altering habitat or food sources.

14 118. In addition, information exists in EPA’s hazard assessments, the scientific literature, or
15 in Material Safety Data Sheets that demonstrate high acute or chronic toxicity of pesticides listed in
16 Exhibit A to one or more taxonomic groups.

17 119. The following statements are additional examples of evidence that pesticides may affect
18 endangered species or threatened species and their designated critical habitats.

19 120. In its 2005 RED for **2,4-D**, EPA states: “The Agency’s level of concern for endangered
20 and threatened freshwater fish and invertebrates, estuarine invertebrates, birds, mammals, aquatic
21 vascular plants, and terrestrial non-target plants is exceeded for the use of 2,4-D.”

22 121. In its 2006 RED for **acephate**, EPA states: “Endangered species LOCs except for fish
23 (estuarine and freshwater) and estuarine invertebrates are exceeded for all uses of acephate. In addition,
24 LOCs are exceeded for endangered species of mammals, amphibians, birds, reptiles, insects, and
25 freshwater invertebrates for the degradate methamidophos formed from all uses of acephate.”

26 122. In its 2007 RED for **aldicarb**, EPA states: “The Agency’s screening level risk
27 assessment for endangered and threatened species concluded that use of aldicarb has direct adverse
28 effects on listed species in the following taxonomic groups: terrestrial invertebrates, birds, terrestrial

1 phase amphibians, reptiles, mammals, freshwater fish, freshwater invertebrates, estuarine/marine
2 invertebrates, and estuarine/marine fish.”

3 123. In its 2006 RED for **atrazine**, EPA states: “Endangered species LOCs are exceeded for
4 terrestrial plants, birds and small mammals from the agricultural uses of atrazine. Acute risks to
5 endangered freshwater invertebrates and aquatic vascular plants are exceeded for all crop uses except
6 for the typical use rate on corn (1.1 lb ai/A). Chronic levels of concern for endangered species are
7 exceeded for fish and aquatic invertebrate reproduction for all use rates, except for corn and the typical
8 use rate on sorghum.”

9 124. In its 2006 IRED for **bensulide**, EPA states: “In general, the acute levels of concern for
10 bensulide are exceeded for freshwater fish, including those for threatened or endangered species, and
11 for freshwater invertebrates.”

12 125. In its 1998 RED for **butralin**, EPA states: “The following endangered species LOCs
13 have been exceeded: herbivorous and insectivorous endangered mammals and freshwater aquatic
14 invertebrates, and estuarine/marine fish and shrimp. Also, there may be possible reproductive effects to
15 birds.”

16 126. In its 1999 RED for **chlorothalonil**, EPA states: “The registered uses of chlorothalonil
17 may adversely affect endangered species of birds (chronically), mammals (chronically), freshwater fish
18 (acutely and chronically), freshwater invertebrates (acutely) and aquatic plants. Mollusks which may be
19 at risk include freshwater mussels (a phylum that includes numerous freshwater endangered species).”

20 127. In its 2003 Fact Sheet for **clothianidin**, EPA states: “Clothianidin is expected to present
21 acute and/or chronic toxicity risk to endangered/threatened birds and mammals via possible ingestion of
22 treated corn and canola seeds. Endangered/threatened non-target insects may be impacted via residue
23 laden pollen and nectar.”

24 128. In 2004 RED for **cycloate**, EPA states: “The screening level risk assessment indicates
25 that cycloate exceeds the endangered species level of concern for chronic risks to mammals.”

26 129. In its 1998 RED for **diphacinone**, EPA states: “Potential secondary risks exist for some
27 avian predators and scavengers that feed on poisoned rodents. The Agency presumes acute high risk to
28 any small mammals that feed on diphacinone baits.”

1 **VIII. EPA's Control Over And Involvement With All Pesticides At Issue In This Complaint**

2 130. All of the following pesticides (as also listed in Exhibit A) are currently registered for
 3 use by EPA: 1,3-Dichloropropene; 10,10'-oxybisphenoxyarsine; 1080; 2,4-D salts and esters (2,4-D;
 4 2,4-D, 2-ethylhexyl ester; 2,4-D, butoxyethanol ester; 2,4-D, diethanolamine salt; 2,4-D, diethylamine
 5 salt; 2,4-D, dimethylamine salt; 2,4-D, isooctyl ester; 2,4-D, isopropyl ester; 2,4-D, isopropylamine salt;
 6 2,4-D, methyamine salt; 2,4-D, sodium salt; 2,4-D, triisopropanolamine salt); 2,4-DB acid and 2,4-DB,
 7 dimethylamine salt; 3-chloro-p-toluidine hydrochloride; 3-iodo-2-propynyl butyl carbamate; 3-
 8 trifluoromethyl-4-nitrophenol; 4-aminopyridine; acephate; acequinocyl; acetamiprid; acetochlor;
 9 acibenzolar-S-methyl; acrolein; alachlor; aldicarb; allethrin stereoisomers, bioallethrin (D-allethrin, D-
 10 trans allethrin, S-bioallethrin); alpha-chlorohydrin; ametryne; aminopyralid and salts (aminopyralid,
 11 aminopyralid potassium salt, and aminopyralid triisopropanolamine salt); amitraz; amitrole; ammonium
 12 bromide; antimycin A; atrazine; avermectin; azinphos-methyl; azoxystrobin; benfluralin; bensulide;
 13 bentazon and salts (bentazon and bentazon sodium salt); bethoxazin; bifenazate; bifenthrin; bis-(N-
 14 cyclohexyldiazaniumdioxy)-copper; brodifacoum; bromacil and salts (bromacil and bromacil lithium
 15 salt); bromadiolone; bromethalin; bromoxynil salts and esters (bromoxynil butyrate, bromoxynil
 16 heptanoate, bromoxynil octanoate, bromoxynil phenol); buprofezin; butralin; butylate; captan; carbaryl;
 17 carbendazim and salts (carbendazim and carbendazim phosphate); carbofuran; carboxin; chelerythrine
 18 chloride-sanguinarine chloride mixture; chlorantraniliprole; chlorethoxyphos; chlorfenapyr;
 19 chlorflurenol, methyl ester; chlorophacinone; chloropicrin; chlorothalonil; chlorpyrifos; chlorpyrifos-
 20 methyl; cholecalciferol; chromium (VI) compounds (chromic acid and sodium bichromate dihydrate);
 21 clodinafop-propargyl; clofentezine; clomazone; clonitralid; clothianidin; coal tar hydrocarbons;
 22 coumaphos; creosote and creosote oil; creosote oil (derived from any source); cyazofamid; cybutryne;
 23 cyclanilide; cycloate; cyfluthrin isomer mixtures (beta-cyfluthrin and cyfluthrin); cyhalofop butyl;
 24 cyhalothrin isomer mixtures (cyhalothrin, lambda; cyhalothrin, gamma); cymoxanil; cypermethrin
 25 isomer mixtures (cypermethrin and zeta-cypermethrin); cyphenonhrin; cyprodinil; cyromazine;
 26 dazomet; DCPA; DDVP; deltamethrin; diazinon; dicamba and salts (dicamba, diethanolamine,
 27 diglycolamine, dimethylamine, isopropylamine, potassium, and sodium salts); dichlobenil; dichloran;
 28 dichlorprop (2,4-DP) salts and esters (2-(2,4-DP), dimethylamine salt; 2,4-DP, isooctyl ester; 2,4-DP,2-

1 ethylhexyl ester; 2,4-DP-P, dimethylamine salt; 2,4-DP-P, isooctyl ester; and dichlorprop-P); diclofop-
2 methyl; dicofol; dicrotophos; difenacoum; difenoconazole; difethialone; diflubenzuron; dimenthenamid
3 and isomers (dimenthenamid, S-dimethenamid); dimethoate; dimethomorph; dinotefuran; diphacinone
4 and salts (diphacinone and diphacinone sodium salts); dipropyl isocinchomeronate; diquat dibromide;
5 dithiopyr; diuron; emamectin; endosulfan; endothall and salts (endothall; endothall, di (N,N-
6 dimethylalkylamine) salt; and endothall, dipotassium salt); EPTC; esfenvalerate; ethalfluralin;
7 ethofenprox; ethofumesate; ethoprop; etoxazole; famoxadone; fenamidone; fenarimol; fenbuconazole;
8 fenbutin-oxide; fenhexamid; fenitrothion; fenoxypyr-P (+/-); fenoxycarb; fenpropathrin;
9 fenpyroximate; fentin hydroxide; ferbam; fipronil; fluazifop-P-butyl; fluazinam; flubendiamide;
10 fludioxonil; flumetralin; flumiclorac-pentyl; flumioxazin; fluometuron; fluopicolide; fluoxasrobin;
11 fluridone; fluroxypyr 1-methylheptyl ester; flurprimidol; fluthiacet-methyl; flutolanil; fluvalinate; folpet;
12 foramsulfuron; forchlorfenuron; formetanate hydrochloride; fosthiazate; furanone (tanol derivatives:
13 dihydro-5-heptyl-2(3H)-furanone and dihydro-5-pentyl-2(3H)-furanone); halofenozide; hexaflumuron;
14 hexazinone; hexythiazox; hydramethylon; imidacloprid; imiprothrin; indoxacarb; inorganic arsenic
15 compounds (arsenic acid and arsenic pentoxide); inorganic nitrate/nitrite (potassium nitrate and sodium
16 nitrate); iprodione; isoxaben; isoxaflutole; kresoxim-methyl; lactofen; linuron; malathion; mancozeb;
17 mandipropamide; maneb; MCPA salts and esters (MCPA; MCPA, 2-ethyl hexyl ester; MCPA,
18 dimethylamine salt; MCPA, isooctyl ester; and MCPA, sodium salt); MCPB and salts (MCPB and
19 MCPB, sodium salt); MCPP and salts (MCPP; MCPP, dimethylamine salt; MCPP-P, dimethylamine
20 salt; MCPP-P, potassium salt; and Mecoprop-P); mefluidide and salts (mefluidide; mefluidide,
21 diethanolamine salt; and mefluidide, potassium salt); metaflumizone; metal naphthenate salts (copper
22 naphthenate and zinc naphthenate); metalaxyl and isomers (mefenoxam and metalaxyl); metaldehyde;
23 metam salts (metam potassium and metam sodium); methidathion; methiocarb; methomyl; methoprene
24 and isomers (methoprene and S-methoprene); methoxyfenozide; methyl bromide; methyl iodide; methyl
25 isothiocyanate; methyl parathion; metiram; metofluthrin; metolachlor and isomers (metolachlor and
26 metolachlor,S); metribuzin; milbemectin (mixture of $\geq 70\%$ Milbemcin A4, & $\leq 30\%$ Milbemycin A3);
27 myclobutanil; N-octyl bicycloheptene dicarboximide; nabam; naled; napropamide; nicarbazin;
28 nicobifen; nonyl phenol ethoxylates; novaluron; oryzalin; oxadiazon; oxamyl; oxydemeton-methyl;

1 oxyfluorfen; para-dichlorobenzene; paraquat dichloride; PCNB; pendimethalin; pentachlorophenol;
 2 permethrin; phenothrin; phorate; phosmet; phosphine; phostebupirim; picloram and salts (picloram;
 3 picloram, potassium salt; and picloram, triisopropanolamine salt); pinoxaden; piperalin; piperonyl
 4 butoxide; pirimiphos-methyl; prallethrin; prodiamine; profenofos; prometryn; propachlor; propamocarb
 5 hydrochloride; propanil; propargite; propiconazole; propoxur; propylene oxide; propyzamide;
 6 prothioconazole; pymetrozine; pyraclostrobin; pyraflufen-ethyl; pyrasulfotole; pyrethrins; pyridaben;
 7 pyridalyl; pyrimethanil; pyriproxyfen; quinoxifen; quizalofop-ethyl and isomers (quizalofop-ethyl and
 8 quizalofop-P-ethyl); reactive phosphide salts (aluminum phosphide and magnesium phosphide);
 9 resmethrin; rotenone; S, S, S-tributyl phosphorotrithioate; sabadilla alkaloids; sethoxydim; siduron;
 10 simazine; sodium chlorate; sodium cyanide; sodium dimethyl dithio carbamate; sodium fluoride;
 11 sodium tetrathiocarbonate; spinetoram (XDE-175-J and XDE-175-L); spinosad; spiroadiclofen;
 12 spiromesifen; spirothetramet; strychnine; sulfentrazone; sulfluramid; sulfosulfuron; tebuconazole;
 13 tebufenozide; tebufenpyrad; tefluthrin; tembotrione; temephos; terbufos; terbuthylazine; terrazole;
 14 tetraconazole; tetramethrin; thiacloprid; thiamethoxam; thidiazuron; thiencarbazone-methyl;
 15 thiobencarb; thiodicarb; thiophanate-methyl; thiram; tolylfluanid; tralomethrin; tralopyril; triadimefon;
 16 triadimenol; triallate; tributylin containing compounds (tributylin benzoate, tributylin maleate, and
 17 tributylin oxide); trichlorfon; triclopyr salts and esters (triclopyr; triclopyr, butoxyethyl ester; and
 18 triclopyr, triethylamine salt); triclosan; trifloxystrobin; trifloxysulfuron-sodium; triflumizole; trifluralin;
 19 triticonazole; vinclozolin; warfarin and salts (warfarin and warfarin, sodium salt); zinc phosphide;
 20 ziram; zoxamide.

21 131. EPA retains ongoing discretionary control and involvement over all of these pesticides,
 22 which constitutes “agency actions” subject to consultation under Section 7(a)(2) of the ESA. 16 U.S.C.
 23 § 1536(a)(2); 50 C.F.R. § 402.02; 50 C.F.R. § 402.03.

24 132. For example, EPA may change the use classification of any pesticide when necessary to
 25 prevent unreasonable adverse effects on the environment. 7 U.S.C. § 136a(d)(2). Also, EPA may
 26 determine that additional data is required to maintain an existing pesticide registration. 7 U.S.C. §
 27 136a(c)(2)(B)(i). Moreover, FIFRA grants EPA authority to change, cancel, restrict, or immediately
 28 suspend registered pesticides, pesticide labeling, or particular uses. 7 U.S.C. § 136d.

1 **IX. EPA's Failure To Reinitiate Consultation And To Implement Previous Biological Opinions**

2 133. In addition to EPA's failure to consult regarding the vast majority of pesticides, EPA has
3 likewise failed to reinitiate consultation for species and pesticides addressed in consultations from 1989
4 and 1993. Moreover, for those species covered in the 1989 and 1993 Biological Opinions, EPA is not
5 meeting its Section 7 "no jeopardy" obligations because EPA is not properly implementing the terms
6 and conditions required by the previous Biological Opinions.

7 134. The Section 7 consultation regulations require reinitiation of consultation when
8 discretionary federal involvement or control over the action has been retained and: (a) the amount or
9 extent of the take specified in the incidental take statement is exceeded; (b) new information reveals
10 effects of the action that may affect listed species or critical habitat in a manner or to an extent not
11 previously considered; or (c) the identified action is subsequently modified in a manner that causes an
12 effect to the listed species that was not considered in the biological opinion. 50 C.F.R. § 402.16. All
13 three situations exist in regard to the 1989 and 1993 Biological Opinions.

14 135. First, new information exists regarding the impacts of pesticides on wildlife and plants.
15 In fact, EPA's own documents provide new information demonstrating the serious potential for
16 significant harm or death to listed species from pesticides. Moreover, pesticides previously consulted
17 on are now being used in new and different manners than that considered at the time of review.

18 136. Second, EPA has failed to ensure the implementation of the reasonable and prudent
19 measures and the reasonable and prudent alternatives associated with the 1989 and 1993 Biological
20 Opinions. Thus, EPA does not know how much take has occurred, and continues to occur, nor whether
21 applicators are adhering to the reasonable and prudent measures and the reasonable and prudent
22 alternatives. EPA must reinitiate consultation given that it has been unable to identify, in any regard,
23 what the past and current amount or extent of take is for species covered by the 1989 or 1993 Biological
24 Opinions.

25 137. Third, because of EPA's failure to implement the terms and conditions of the 1989 and
26 1993 Biological Opinions, "the identified action [has been] modified in a manner that causes an effect
27 to the listed species that was not considered in the biological opinion." 50 C.F.R. § 402.16.
28

1 138. Finally, because the terms and conditions of the 1989 and 1993 Biological Opinions are
2 not being enforced, or even monitored, EPA is failing to ensure that its authorizations of pesticide use
3 are not jeopardizing ESA listed species.

4 **CLAIM FOR RELIEF**

5 **Violation Of The Endangered Species Act, 16 U.S.C. § 1536(a)(2)**
6 **(EPA's Failure To Consult Or Reinitiate Consultation On Pesticide Registrations That**
7 **May Affect Endangered and Threatened Species)**

8 139. All allegations set forth above in this Complaint are incorporated herein by reference.

9 140. All pesticides indentified in the paragraphs above and in Exhibit A are currently
10 registered for use by EPA.

11 141. EPA retains ongoing discretionary control and involvement over all of these pesticides,
12 which constitutes "agency action" subject to consultation under Section 7(a)(2) of the ESA. 16 U.S.C. §
13 1536(a)(2); 50 C.F.R. § 402.02; 50 C.F.R. § 402.03.

14 142. Because ongoing agency actions related to the pesticides indentified in the paragraphs
15 above and in Exhibit A "may affect" listed species and critical habitat, and because the standards for
16 reinitiating consultation exist, EPA is required to initiate or reinitiate consultation with the Service. 50
17 C.F.R. § 402.14(a); 50 C.F.R. § 402.16.

18 143. EPA has not initiated or reinitiated consultation with the Service on all affected
19 endangered and threatened species.

20 144. EPA is violating Section 7(a)(2) of the ESA and its implementing regulations by failing
21 to initiate and reinitiate consultation with the Service and by failing to ensure through consultation that
22 its actions regarding the pesticides identified above do not jeopardize the continued existence of
23 endangered and threatened species or destroy or adversely modify designated critical habitat. 16 U.S.C.
24 §§ 1536(a)(2); 50 C.F.R. Part 402. This constitutes a violation of the ESA within the meaning of 16
25 U.S.C. § 1540(g).

26 **PRAYER FOR RELIEF**

27 WHEREFORE, Plaintiffs respectfully request that the Court enter judgment providing the
28 following relief:

1 1. Declare that EPA is violating Section 7(a)(2) of the ESA by failing to consult with the
2 Service concerning effects of pesticides on the endangered and threatened species and critical habitats
3 identified herein;

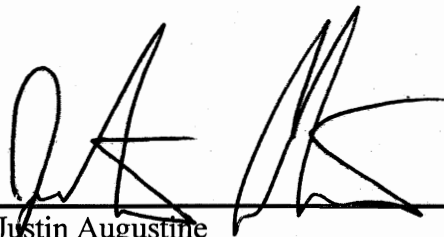

4 2. Order EPA to begin or reinstate consultation pursuant to Section 7(a)(2) of the ESA on
5 the effects of pesticides identified herein on the endangered and threatened species and critical habitats
6 identified herein in an expeditious fashion;

7 3. Order appropriate restrictions on the use of the identified pesticides where they may
8 affect endangered and threatened species and critical habitats until the consultation process has been
9 completed and EPA has brought its pesticide registrations into compliance with Section 7(a)(2) of the
10 ESA;

11 4. Award Plaintiffs' costs, including reasonable attorneys' fees and expert witness fees; and

12 5. Grant Plaintiffs such additional and further relief as the Court may deem just and
13 appropriate.

14
15 Respectfully submitted this 19th day of January, 2011,

16

EXHIBIT A

Exhibit A: Endangered or Threatened Species That May Be Affected By Registered Pesticides

The following chart lists chemical groups that are subject to this case and then lists the species that may be affected by that chemical group. At the end of the chart is a list of chemical groups and the chemicals associated with each such chemical group.

Endangered or Threatened Species That May Be Affected by Each Chemical			
Chemical Group Name	Taxa	Species Common Name	Species Latin Name
1,3-Dichloropropene	Amphibians	Arroyo toad	<i>Bufo californicus</i>
	Amphibians	California tiger salamander (Central California DPS, except <i>Ambystoma californiense</i> (Central California DPS) for Bay Area Counties)	
	Amphibians	California tiger salamander (Santa Barbara County DPS)	<i>Ambystoma californiense</i> (Santa Barbara DPS)
	Amphibians	Chiricahua leopard frog	<i>Rana chiricahuensis</i>
	Amphibians	Frosted flatwoods salamander	<i>Ambystoma cingulatum</i>
	Amphibians	Mountain yellow-legged frog (Southern California DPS)	<i>Rana muscosa</i>
	Amphibians	Reticulated flatwoods salamander	<i>Ambystoma bishopi</i>
	Amphibians	San Marcos salamander	<i>Eurycea nana</i>
	Amphibians	Santa Cruz long-toed salamander	<i>Ambystoma macrodactylum croceum</i>
	Amphibians	Texas Blind Salamander	<i>Eurycea rathbuni</i>
	Amphibians	Wyoming toad	<i>Bufo baxteri</i>
	Crustaceans	Conservancy fairy shrimp	<i>Branchinecta conservatio</i>
	Crustaceans	Peck's Cave amphipod	<i>Stygobromus pecki</i>
	Crustaceans	San Diego fairy shrimp	<i>Branchinecta sandiegonensis</i>
	Crustaceans	Shasta crayfish	<i>Pacifastacus fortis</i>
	Crustaceans	Squirrel Chimney cave shrimp	<i>Palaemonetes cummingsi</i>
	Fish	Amber darter	<i>Percina antesella</i>
	Fish	Blue shiner	<i>Cyprinella caerulea</i>
	Fish	Bonytail chub	<i>Gila elegans</i>
	Fish	Bull trout (U.S. DPS)	<i>Salvelinus confluentus</i> (U.S. DPS)
	Fish	Cape Fear shiner	<i>Notropis mekistocholas</i>
	Fish	Cherokee darter	<i>Etheostoma scotti</i>
	Fish	Colorado pikeminnow	<i>Ptychocheilus lucius</i>
	Fish	Desert pupfish	<i>Cyprinodon macularius</i> + <i>Cyprinodon eremus</i>
	Fish	Devils River minnow	<i>Dionda diaboli</i>
	Fish	Etowah darter	<i>Etheostoma etowahae</i>
	Fish	Fountain darter	<i>Etheostoma fonticola</i>
	Fish	Goldline darter	<i>Percina aurolineata</i>
	Fish	Gulf sturgeon	<i>Acipenser oxyrinchus desotoi</i>
	Fish	Humpback chub	<i>Gila cypha</i>
Fish	Little Colorado spinedace	<i>Lepidomeda vittata</i>	
Fish	Lost River sucker	<i>Deltistes luxatus</i>	
Fish	North American green sturgeon (southern DPS)	<i>Acipenser medirostris</i> (southern DPS)	
Fish	Oregon chub	<i>Oregonichthys crameri</i>	
Fish	Razorback sucker	<i>Xyrauchen texanus</i>	
Fish	Santa Ana sucker	<i>Catostomus santaanae</i>	
Fish	Shortnose sturgeon	<i>Acipenser brevirostrum</i>	
Fish	Smalltooth sawfish (U.S. DPS)	<i>Pristis pectinata</i> (U.S. DPS)	
Fish	Snail darter	<i>Percina tanasi</i>	
Fish	Waccamaw silverside	<i>Menidia extensa</i>	
10,10'-Oxybisphenoxyarsine	Amphibians	Arroyo toad	<i>Bufo californicus</i>
	Amphibians	California tiger salamander (Central California DPS, except <i>Ambystoma californiense</i> (Central California DPS) for Bay Area Counties)	
	Amphibians	California tiger salamander (Santa Barbara County DPS)	<i>Ambystoma californiense</i> (Santa Barbara DPS)
	Amphibians	Chiricahua leopard frog	<i>Rana chiricahuensis</i>
	Amphibians	Frosted flatwoods salamander	<i>Ambystoma cingulatum</i>
	Amphibians	Guajon	<i>Eleutherodactylus cooki</i>
	Amphibians	Mississippi gopher frog (DPS)	<i>Rana sevosia</i>
	Amphibians	Mountain yellow-legged frog (Southern California DPS)	<i>Rana muscosa</i>
	Amphibians	Puerto Rican crested toad	<i>Peltophryne lemur</i>
	Amphibians	Red Hills Salamander	<i>Phaeognathus hubrichti</i>
	Amphibians	Reticulated flatwoods salamander	<i>Ambystoma bishopi</i>

Endangered or Threatened Species That May Be Affected by Each Chemical			
Chemical Group Name	Taxa	Species Common Name	Species Latin Name
	Amphibians	San Marcos salamander	<i>Eurycea nana</i>
	Amphibians	Santa Cruz long-toed salamander	<i>Ambystoma macrodactylum croceum</i>
	Amphibians	Shenandoah Salamander	<i>Plethodon shenandoah</i>
	Amphibians	Texas Blind Salamander	<i>Eurycea rathbuni</i>
	Amphibians	Wyoming toad	<i>Bufo baxteri</i>
	Crustaceans	Alabama cave shrimp	<i>Palaemonias alabamiae</i>
	Crustaceans	Cave crayfish	<i>Cambarus aculabrum</i>
	Crustaceans	Conservancy fairy shrimp	<i>Branchinecta conservatio</i>
	Crustaceans	Illinois Cave amphipod	<i>Gammarus acherondytes</i>
	Crustaceans	Kauai Cave Amphipod	<i>Spelaeorchestia koloana</i>
	Crustaceans	Nashville crayfish	<i>Orconectes shoupi</i>
	Crustaceans	Peck's Cave amphipod	<i>Stygobromus pecki</i>
	Crustaceans	San Diego fairy shrimp	<i>Branchinecta sandiegonensis</i>
	Crustaceans	Shasta crayfish	<i>Pacifastacus fortis</i>
	Crustaceans	Squirrel Chimney cave shrimp	<i>Palaemonetes cummingsi</i>
	Fish	Alabama cavefish	<i>Speoplatyrhinus poulsoni</i>
	Fish	Alabama sturgeon	<i>Scaphirhynchus suttkusi</i>
	Fish	Amber darter	<i>Percina antesella</i>
	Fish	Atlantic salmon (Gulf of Maine DPS)	<i>Salmo salar</i>
	Fish	Bayou darter	<i>Etheostoma rubrum</i>
	Fish	Blue shiner	<i>Cyprinella caerulea</i>
	Fish	Bonytail chub	<i>Gila elegans</i>
	Fish	Boulder darter	<i>Etheostoma wapiti</i>
	Fish	Bull trout (U.S. DPS)	<i>Salvelinus confluentus (U.S. DPS)</i>
	Fish	Cape Fear shiner	<i>Notropis mekistocholas</i>

	Insects	Delhi Sands flower-loving fly	<i>Rhaphiomidas terminatus abdominalis</i>
	Insects	Fender's blue	<i>Icaricia icarioides fenderi</i>
	Insects	Hine's emerald dragonfly	<i>Somatochlora hineana</i>
	Insects	Karner blue	<i>Plebejus melissa samuelis</i>
	Insects	Kauai Cave Wolf Spider	<i>Adelocosa anops</i>
	Insects	Kern primrose sphinx moth	<i>Euproserpinus euterpe</i>
	Insects	Lange's metalmark	<i>Apodemia mormo langei</i>
	Insects	Mitchell's satyr butterfly	<i>Neonympha mitchellii mitchellii</i>
	Insects	Myrtle's silverspot	<i>Speyeria zerene myrtleae (sensu lato)</i>
	Insects	Northeastern beach tiger beetle	<i>Cicindela dorsalis dorsalis</i>
	Insects	Ohlone tiger beetle	<i>Cicindela ohlone</i>
	Insects	Quino checkerspot butterfly	<i>Euphydryas editha quino</i>
	Insects	Robber Baron Cave meshweaver	<i>Cicurina baronia</i>
	Insects	Salt Creek tiger beetle	<i>Cicindela nevadica lincolniana</i>
	Insects	San Bruno elfin	<i>Callophrys mossii bayensis</i>
	Insects	Schaus swallowtail	<i>Papilio aristodemus ponceanus</i>
	Insects	Spruce-fir moss spider	<i>Microhexura montivaga</i>
	Insects	Zayante band-winged grasshopper	<i>Trimerotropis infantilis</i>
Myclobutanil	Crustaceans	Conservancy fairy shrimp	<i>Branchinecta conservatio</i>
	Crustaceans	Illinois Cave amphipod	<i>Gammarus acherondytes</i>
	Crustaceans	Nashville crayfish	<i>Orconectes shoupi</i>
	Crustaceans	Peck's Cave amphipod	<i>Stygobromus pecki</i>
	Crustaceans	San Diego fairy shrimp	<i>Branchinecta sandiegonensis</i>
	Crustaceans	Shasta crayfish	<i>Pacifastacus fortis</i>
	Crustaceans	Squirrel Chimney cave shrimp	<i>Palaemonetes cummingsi</i>
N-octyl bicycloheptene dicarboximide	Amphibians	Arroyo toad	<i>Bufo californicus</i>
	Amphibians	California tiger salamander (Central California DPS, except for Bay Area Counties)	<i>Ambystoma californiense (Central California DPS)</i>
	Amphibians	California tiger salamander (Santa Barbara County DPS)	<i>Ambystoma californiense (Santa Barbara DPS)</i>
	Amphibians	Chiricahua leopard frog	<i>Rana chiricahuensis</i>
	Amphibians	Frosted flatwoods salamander	<i>Ambystoma cingulatum</i>
	Amphibians	Guajon	<i>Eleutherodactylus cooki</i>
	Amphibians	Mississippi gopher frog (DPS)	<i>Rana sevens</i>
	Amphibians	Mountain yellow-legged frog (Southern California DPS)	<i>Rana muscosa</i>
	Amphibians	Puerto Rican crested toad	<i>Peltophryne lemur</i>
	Amphibians	Red Hills Salamander	<i>Phaeognathus hubrichti</i>
	Amphibians	Reticulated flatwoods salamander	<i>Ambystoma bishopi</i>
	Amphibians	San Marcos salamander	<i>Eurycea nana</i>
	Amphibians	Santa Cruz long-toed salamander	<i>Ambystoma macrodactylum croceum</i>
	Amphibians	Shenandoah Salamander	<i>Plethodon shenandoah</i>
	Amphibians	Texas Blind Salamander	<i>Eurycea rathbuni</i>
	Amphibians	Wyoming toad	<i>Bufo baxteri</i>
	Crustaceans	Alabama cave shrimp	<i>Palaemonias alabamiae</i>
	Crustaceans	Cave crayfish	<i>Cambarus aculabrum</i>
	Crustaceans	Conservancy fairy shrimp	<i>Branchinecta conservatio</i>
	Crustaceans	Illinois Cave amphipod	<i>Gammarus acherondytes</i>
	Crustaceans	Kauai Cave Amphipod	<i>Spelaeorchestia koloana</i>
	Crustaceans	Nashville crayfish	<i>Orconectes shoupi</i>
	Crustaceans	Peck's Cave amphipod	<i>Stygobromus pecki</i>
	Crustaceans	San Diego fairy shrimp	<i>Branchinecta sandiegonensis</i>
	Crustaceans	Shasta crayfish	<i>Pacifastacus fortis</i>
	Crustaceans	Squirrel Chimney cave shrimp	<i>Palaemonetes cummingsi</i>
	Fish	Alabama cavefish	<i>Speoplatyrhinus poulsoni</i>
	Fish	Alabama sturgeon	<i>Scaphirhynchus suttkusi</i>
	Fish	Amber darter	<i>Percina antesella</i>
	Fish	Atlantic salmon (Gulf of Maine DPS)	<i>Salmo salar</i>
	Fish	Bayou darter	<i>Etheostoma rubrum</i>
	Fish	Blue shiner	<i>Cyprinella caerulea</i>
	Fish	Bonytail chub	<i>Gila elegans</i>
	Fish	Boulder darter	<i>Etheostoma wapiti</i>
	Fish	Bull trout (U.S. DPS)	<i>Salvelinus confluentus (U.S. DPS)</i>
	Fish	Cape Fear shiner	<i>Notropis mekistocholas</i>
	Fish	Cherokee darter	<i>Etheostoma scotti</i>

Endangered or Threatened Species That May Be Affected by Each Chemical			
Chemical Group Name	Taxa	Species Common Name	Species Latin Name
	Fish	Colorado pikeminnow	<i>Ptychocheilus lucius</i>
	Fish	Desert pupfish	<i>Cyprinodon macularius</i> + <i>Cyprinodon eremus</i>
	Fish	Devils River minnow	<i>Dionda diaboli</i>
	Fish	Etowah darter	<i>Etheostoma etowahae</i>
	Fish	Fountain darter	<i>Etheostoma fonticola</i>
	Fish	Goldline darter	<i>Percina aurolineata</i>
	Fish	Gulf sturgeon	<i>Acipenser oxyrinchus desotoi</i>
	Fish	Humpback chub	<i>Gila cypha</i>
	Fish	Leopard darter	<i>Percina pantherina</i>
	Fish	Little Colorado spinedace	<i>Lepidomeda vittata</i>
	Fish	Lost River sucker	<i>Deltistes luxatus</i>
	Fish	Niangua darter	<i>Etheostoma nianguae</i>
	Fish	North American green sturgeon (southern DPS)	<i>Acipenser medirostris (southern DPS)</i>
	Fish	Oregon chub	<i>Oregonichthys crameri</i>
	Fish	Ozark cavefish	<i>Amblyopsis rosae</i>
	Fish	Pecos bluntnose shiner	<i>Notropis simus pecosensis</i>

Endangered or Threatened Species That May Be Affected by Each Chemical			
Chemical Group Name	Taxa	Species Common Name	Species Latin Name
	Fish	Etowah darter	<i>Etheostoma etowahae</i>
	Fish	Fountain darter	<i>Etheostoma fonticola</i>
	Fish	Goldline darter	<i>Percina aurolineata</i>
	Fish	Gulf sturgeon	<i>Acipenser oxyrinchus desotoi</i>
	Fish	Humpback chub	<i>Gila cypha</i>
	Fish	Leopard darter	<i>Percina pantherina</i>
	Fish	Little Colorado spinedace	<i>Lepidomeda vittata</i>
	Fish	Lost River sucker	<i>Deltistes luxatus</i>
	Fish	Niangua darter	<i>Etheostoma nianguae</i>
	Fish	North American green sturgeon (southern DPS)	<i>Acipenser medirostris (southern DPS)</i>
	Fish	Oregon chub	<i>Oregonichthys crameri</i>
	Fish	Ozark cavefish	<i>Amblyopsis rosae</i>
	Fish	Pecos bluntnose shiner	<i>Notropis simus pecosensis</i>
	Fish	Pygmy madtom	<i>Noturus stanauli</i>
	Fish	Razorback sucker	<i>Xyrauchen texanus</i>
	Fish	Rio Grande silvery minnow	<i>Hybognathus amarus</i>
	Fish	Santa Ana sucker	<i>Catostomus santaanae</i>
	Fish	Shortnose sturgeon	<i>Acipenser brevirostrum</i>
	Fish	Smalltooth sawfish (U.S. DPS)	<i>Pristis pectinata (U.S. DPS)</i>
	Fish	Snail darter	<i>Percina tanasi</i>
	Fish	Topeka shiner	<i>Notropis topeka</i>
	Fish	Vermilion darter	<i>Etheostoma chermocki</i>
	Fish	Waccamaw silverside	<i>Menidia extensa</i>
	Fish	Watercress darter	<i>Etheostoma nuchale</i>
	Mammals	Amargosa vole	<i>Microtus californicus scirpensis</i>
	Mammals	Black-footed ferret	<i>Mustela nigripes</i>
	Mammals	Buena Vista Lake ornate Shrew	<i>Sorex ornatus relictus</i>
	Mammals	Carolina northern flying squirrel	<i>Glaucomys sabrinus coloratus</i>
	Mammals	Columbian white-tailed deer (Columbia River DPS)	<i>Odocoileus virginianus leucurus (Columbia River DPS)</i>
	Mammals	Delmarva Peninsula fox squirrel	<i>Sciurus niger cinereus</i>
	Mammals	Florida panther	<i>Puma concolor coryi</i>
	Mammals	Florida salt marsh vole	<i>Microtus pennsylvanicus dukecampbelli</i>
	Mammals	Fresno kangaroo rat	<i>Dipodomys nitratoides exilis</i>
	Mammals	Giant kangaroo rat	<i>Dipodomys ingens</i>
	Mammals	Gray bat	<i>Myotis grisescens</i>
	Mammals	Gray wolf	<i>Canis lupus</i>
	Mammals	Gulf Coast jaguarundi	<i>Herpailurus yaguarondi cacomitli</i>
	Mammals	Indiana bat	<i>Myotis sodalis</i>
	Mammals	Key Largo cotton mouse	<i>Peromyscus gossypinus</i>
	Mammals	Key Largo woodrat	<i>Neotoma floridana smalli</i>
	Mammals	Killer whale (southern resident DPS)	<i>Orcinus orca (Southern resident population)</i>
	Mammals	Louisiana black bear	<i>Ursus americanus luteolus</i>
	Mammals	Lower keys rabbit	<i>Sylvilagus palustris hefneri</i>
	Mammals	Morro Bay kangaroo rat	<i>Dipodomys heermanni morroensis</i>
	Mammals	Ocelot	<i>Leopardus pardalis</i>
	Mammals	Ozark big-eared bat	<i>Corynorhinus townsendii ingens</i>
	Mammals	Preble's meadow jumping mouse	<i>Zapus hudsonius preblei</i>

	Mollusks	Gulf moccasinshell	<i>Medionidus penicillatus</i>
	Mollusks	James spinymussel	<i>Pleurobema collina</i>
	Mollusks	Littlewing pearlymussel	<i>Pegias fabula</i>
	Mollusks	Morro shoulderband snail	<i>Helminthoglypta walkeriana</i>
	Mollusks	Northern riffleshell	<i>Epioblasma torulosa rangiana</i>
	Mollusks	Ochlockonee moccasinshell	<i>Medionidus simpsonianus</i>
	Mollusks	Oval pigtoe	<i>Pleurobema pyriforme</i>
	Mollusks	Oyster mussel	<i>Epioblasma capsaeformis</i>
	Mollusks	Pecos Assiminea	<i>Assiminea pecos</i>
	Mollusks	Pink mucket	<i>Lampsilis abrupta</i>
	Mollusks	Purple bankclimber	<i>Elliptioideus sloatianus</i>
	Mollusks	Purple bean	<i>Villosa perpurpurea</i>
	Mollusks	Rough pigtoe	<i>Pleurobema plenum</i>
	Mollusks	Rough rabbitsfoot	<i>Quadrula cylindrica strigillata</i>
	Mollusks	Shiny pigtoe	<i>Fusconaia cor</i>
	Mollusks	Shinyrayed pocketbook	<i>Lampsilis subangulata or Hamiota subangulata</i>
	Mollusks	Southern acornshell	<i>Epioblasma othcaloogensis</i>
	Mollusks	Southern clubshell	<i>Pleurobema decisum</i>
	Mollusks	Southern pigtoe	<i>Pleurobema georgianum</i>
	Mollusks	Stock Island tree snail	<i>Orthalicus reses reses</i>
	Mollusks	Tan riffleshell	<i>Epioblasma florentina walkeri</i>
	Mollusks	Triangular kidneyshell	<i>Ptychobranchus greenii</i>
	Mollusks	Upland combshell	<i>Epioblasma metastricata</i>
	Reptiles	Atlantic salt marsh snake	<i>Nerodia clarkii taeniata</i>

Endangered or Threatened Species That May Be Affected by Each Chemical			
Chemical Group Name	Taxa	Species Common Name	Species Latin Name
	Reptiles	Bluetail mole skink	<i>Eumeces egregius lividus</i>
	Reptiles	Blunt-nosed leopard lizard	<i>Gambelia sila</i>
	Reptiles	Bog turtle (Northern DPS)	<i>Glyptemys muhlenbergii (Northern DPS)</i>
	Reptiles	Coachella Valley fringe-toed lizard	<i>Uma inornata</i>
	Reptiles	Desert tortoise (Mojave DPS)	<i>Gopherus agassizii</i>
	Reptiles	Eastern indigo snake	<i>Drymarchon couperi</i>
	Reptiles	Giant garter snake	<i>Thamnophis gigas</i>
	Reptiles	Sand skink	<i>Neoseps reynoldsi</i>
Zoxamide	Fish	Bull trout (U.S. DPS)	<i>Salvelinus confluentus (U.S. DPS)</i>
	Fish	North American green sturgeon (southern DPS)	<i>Acipenser medirostris (southern DPS)</i>
	Fish	Topeka shiner	<i>Notropis topeka</i>
	Mollusks	Bliss Rapids snail	<i>Taylorconcha serpenticola</i>
	Mollusks	Higgins eye pearlymussel	<i>Lampsilis higginsii</i>
	Mollusks	Snake River physa	<i>Physa natricina</i>
	Mollusks	Winged mapleleaf	<i>Quadrula fragosa</i>

Pinoxaden	Pinoxaden	7266	147500
Piperalin	Piperalin	3114	097003
Piperonyl butoxide	Piperonyl butoxide	2525	067501
Pirimiphos-methyl	Pirimiphos-methyl	2535	108102
Prallethrin	Prallethrin	7418	128722
Prodiamine	Prodiamine	7201	110201
Profenofos	Profenofos	2540	111401
Prometryn	Prometryn	0467	080805
Propachlor	Propachlor	0177	019101
Propamocarb hydrochloride	Propamocarb hydrochloride	3124	119302
Propanil	Propanil	0226	028201
Propargite	Propargite	0243	097601
Propiconazole	Propiconazole	3125	122101
Propoxur	Propoxur	2555	047802
Propylene oxide	Propylene oxide	2560	042501
Propyzamide	Propyzamide	0082	101701
Prothioconazole	Prothioconazole	7054	113961
Pymetrozine	Pymetrozine	7611	101103
Pyraclostrobin	Pyraclostrobin	7034	099100
Pyraflufen-ethyl	Pyraflufen-ethyl	7259	030090
Pyrasulfotole	Pyrasulfotole	7272	000692
Pyrethrins	Pyrethrins	2580	069001
Pyridaben	Pyridaben	7417	129105
Pyridalyl	Pyridalyl	NA	295149
Pyrimethanil	Pyrimethanil	NA	288201
Pyriproxyfen	Pyriproxyfen	7424	129032
Quinoxifen	Quinoxifen	7037	055459
Quizalofop-ethyl and isomers	Quizalofop-ethyl	7215	128711
Quizalofop-ethyl and isomers	Quizalofop-P-ethyl	7215	128709
Reactive phosphide salts (Al, Mg)	Aluminum Phosphide	0025	066501
Reactive phosphide salts (Al, Mg)	Magnesium Phosphide	0645	066504
Resmethrin	Resmethrin	0421	097801

Chemical Group	Chemical Name	EPA Case No	EPA PC Code
Rotenone	Rotenone	0255	071003
S,S,S-tributyl phosphorotrithioate	S,S,S-tributyl phosphorotrithioate	2145	074801
Sabadilla alkaloids	Sabadilla alkaloids	3128	002201
Sethoxydim	Sethoxydim	2600	121001
Siduron	Siduron	3130	035509
Simazine	Simazine	0070	080807
Sodium chlorate	Sodium chlorate	4049	073301
Sodium cyanide	Sodium cyanide	3086	074002
Sodium dimethyl dithio carbamate	Sodium dimethyl dithio carbamate	8100	034804
Sodium fluoride	Sodium fluoride	3132	075202
Sodium Tetrathiocarbonate	Sodium Tetrathiocarbonate	7009	128904
Spinetoram and spinosad	Spinetoram (XDE-175-J)	7448	110008
Spinetoram and spinosad	Spinetoram (XDE-175-L)	7448	110009
Spinetoram and spinosad	Spinosad (mixture of Factors A and D)	7421	110003
Spirodiclofen	Spirodiclofen	7443	124871
Spiromesifen	Spiromesifen	7442	024875
Spirotetramat	Spirotetramat	NA	392201
Strychnine	Strychnine	3133	076901
Sulfentrazone	Sulfentrazone	7231	129081
Sulfluramid	Sulfluramid	7411	128992
Sulfosulfuron	Sulfosulfuron	7247	085601
Tebuconazole	Tebuconazole	7004	128997
Tebufenozide	Tebufenozide	7416	129026
Tebufenpyrad	Tebufenpyrad	7435	090102
Tefluthrin	Tefluthrin	7409	128912
Tembotrione	Tembotrione	7273	012801
Temphos	Temphos	0006	059001
Terbufos	Terbufos	0109	105001
Terbutylazine	Terbutylazine	2645	080814
Terrazole	Terrazole	0009	084701
Tetraconazole	Tetraconazole	7043	120603
Tetramethrin	Tetramethrin	2660	069003
Thiacloprid	Thiacloprid	7622	014019
Thiamethoxam	Thiamethoxam	7614	060109
Thidiazuron	Thidiazuron	4092	120301
Thiencarbazone-methyl	Thiencarbazone-methyl	NA	015804
Thiobencarb	Thiobencarb	2665	108401
Thiodicarb	Thiodicarb	2675	114501
Thiophanate-methyl	Thiophanate-methyl	2680	102001
