**Re: Approval to Introduce Hazardous Fluids: LP Fuel Gas to the Hot Oil Heaters and Distribution of High Temperature Hot Oil**

Dear Mr. Musser:

I grant your request for Venture Global Plaquemines LNG, LLC (Venture Global) to introduce low-pressure fuel gas to the hot oil heaters to circulate high temperature hot oil through the distribution system, as described in your November 4, 2024 filing. Your request is consistent with Conditions 11, 104, 106-110, 113, 115, and 118 of the Commission's September 30, 2019 *Order Granting Authorizations Under Sections 3 and 7 of the Natural Gas Act* (Order) in the above-referenced docket. This approval is based on FERC staff's on-site inspection, and review of the information filed on November 4, 8, and 12, 2024.

I remind you that Venture Global must comply with all applicable remaining terms and conditions of the above referenced Order, as well as procedures stipulated in your previous filings. We also note that Venture Global must also comply with any applicable Department of Transportation requirements under 49 CFR 193 subject to Department of Transportation Pipeline and Hazardous Materials Safety Administration enforcement.

Please note that this approval does not grant Venture Global the authority to construct, commission, or introduce hazardous fluid to other project facilities at the LNG terminal. Additional authorizations will be released once Venture Global has demonstrated full compliance with the conditions of the Order. Furthermore, we note that FERC staff look to continuously evaluate the safety and reliability of LNG facilities through its technical reviews and inspections, which may result in recommendations.

If you have any questions regarding this approval, please contact Jason Chan at (202) 502-6199.

Sincerely,

Hugh Thomas  
Chief, LNG Branch 2
